Project Purpose & Need

Operations	Safety	Safety
Intersection expected to operate at LOS F by Year 2050 without additional improvements	High crash rates ; 45 reported intersection crashes between 2021 and 2025 (16 injury crashes and 1 fatal crash)	Rapid urbanizing land uses
Intersection is important to both regional and local networks for commuters and tourists	Weighted crash rate nearly 2.5 times higher than the next highest intersection weighted crash rate within the sub-area	This corridor within the is one of the fastest growing areas within the RCAMPO area
	Crash rate, types, and locations consistent with intersection congestion , unexpected queue lengths, and weather-related road conditions	Future development expected to generate considerable amount of traffic and alter traffic patterns

Proposed Improvements

Conversion of Highway 16/16B/Catron Boulevard from at-grade intersection to Single Point Interchange	Improvement and expansion of sidewalks and shared-use pathways
Traffic signal installation at Promise Road and Highway 16	Highway 16 mainline and service road improvements

Project Schedule

**These dates are tentative and subject to change.*

One Interchange – Three Projects

Project 1 (2026/2027*-2028)
**depending on bid/letting date*

Project 2 (2029-2030)

Project 3 (2031-2032)

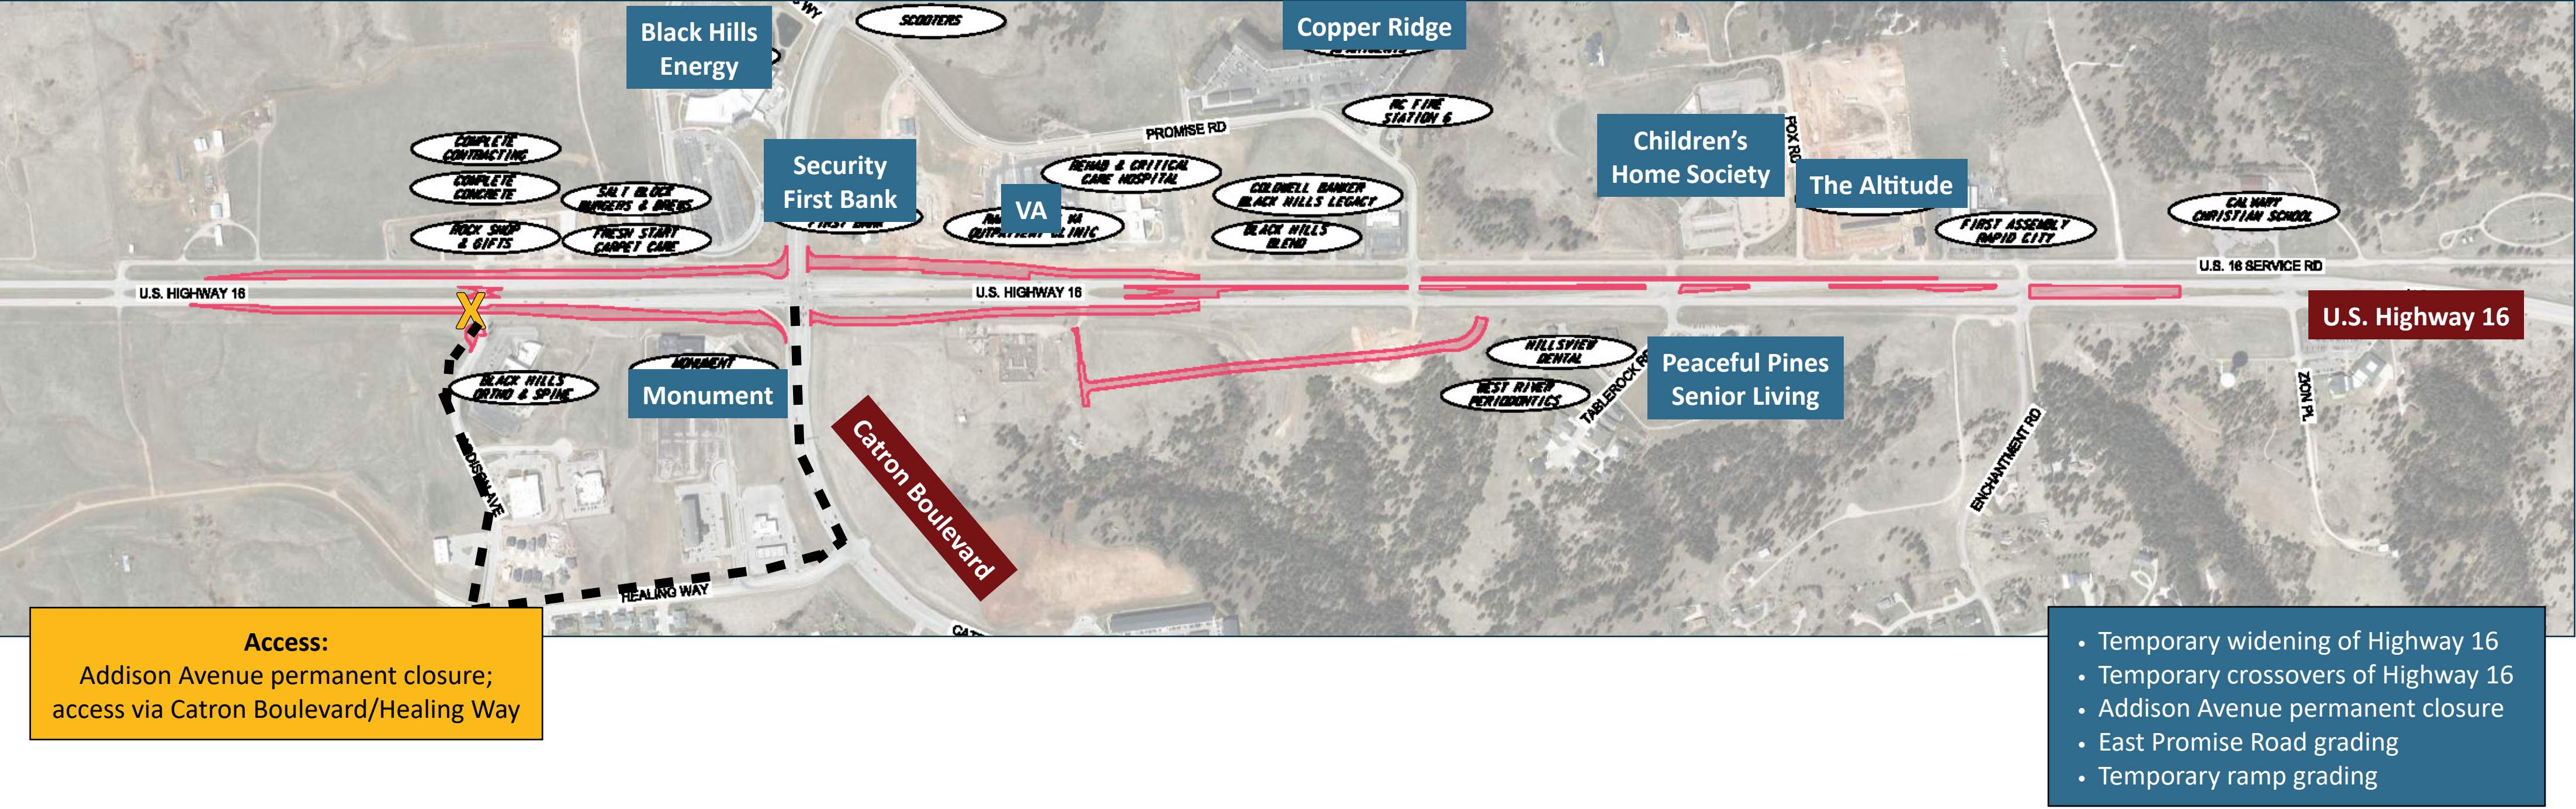

These dates are tentative and subject to change.

Project 1 Phasing

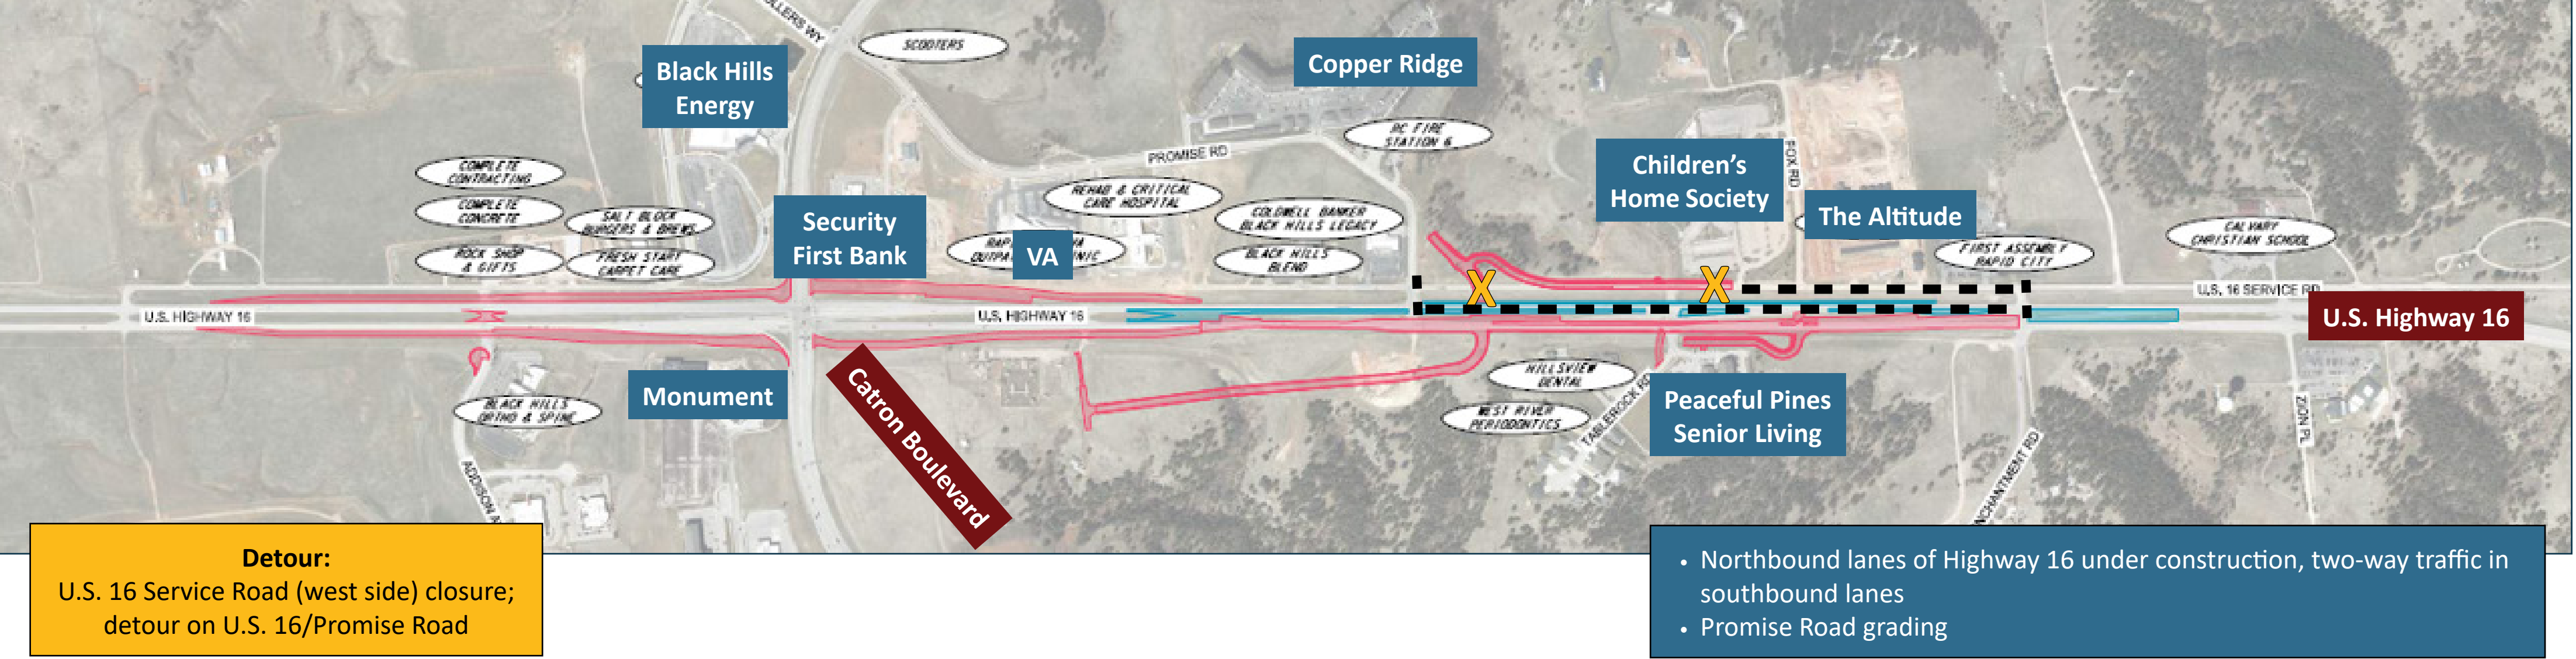

Phase 1

Work areas and details are tentative and subject to change.

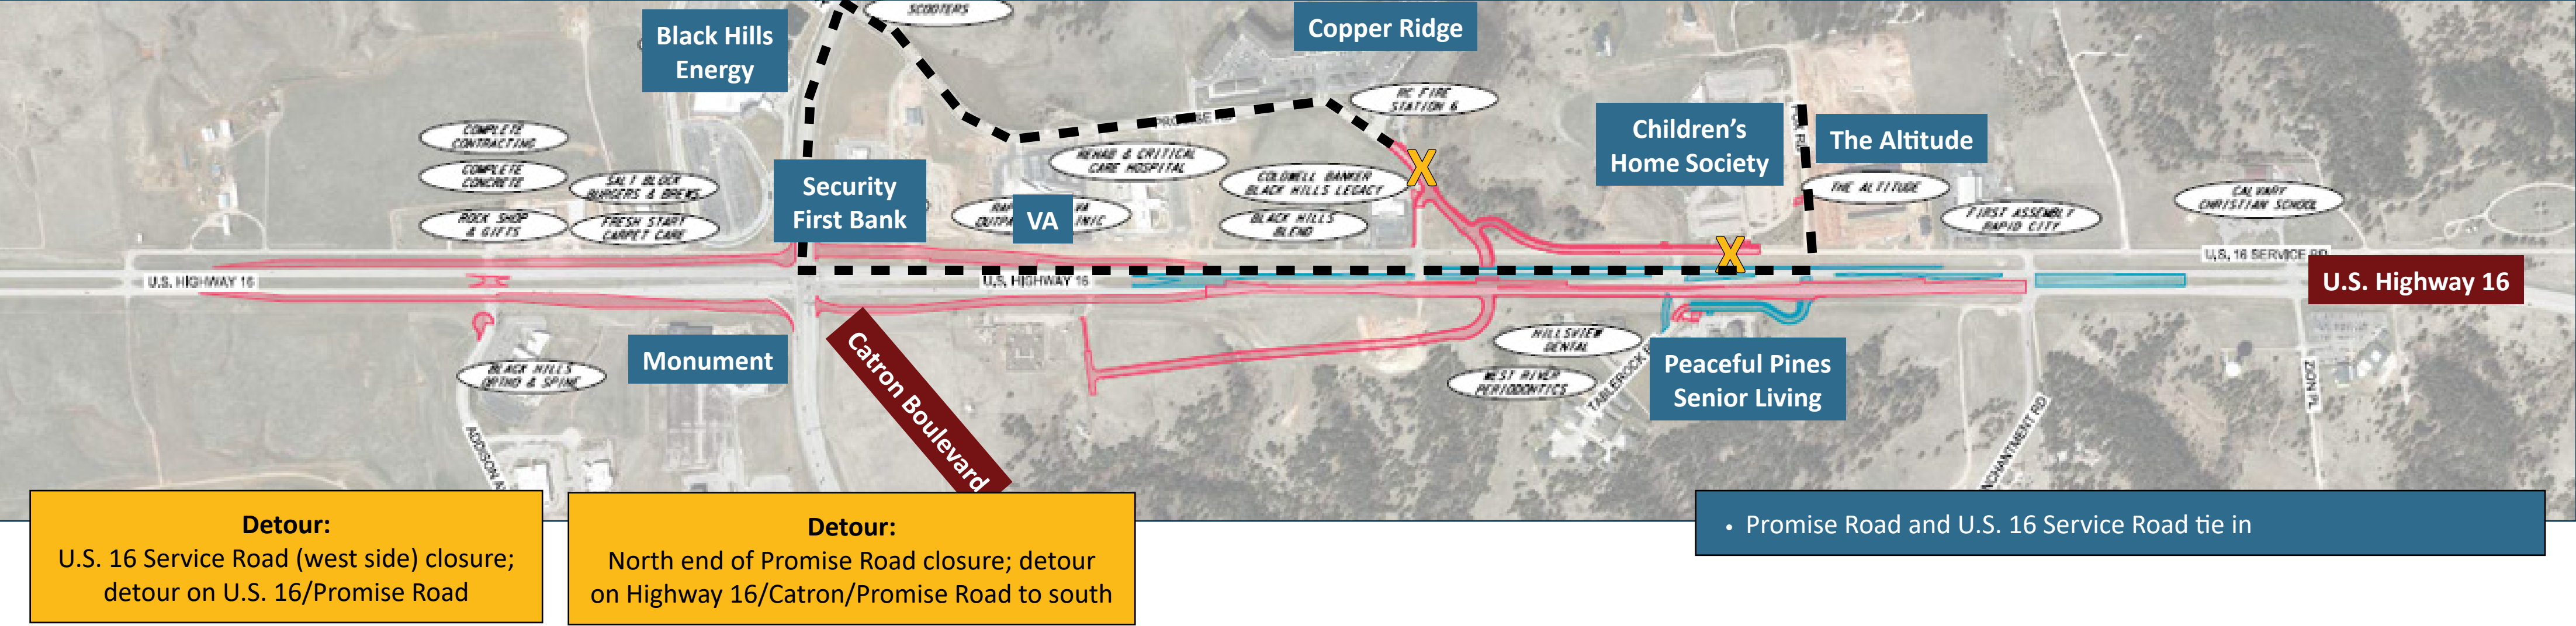

Phase 2A

Work areas and details are tentative and subject to change.

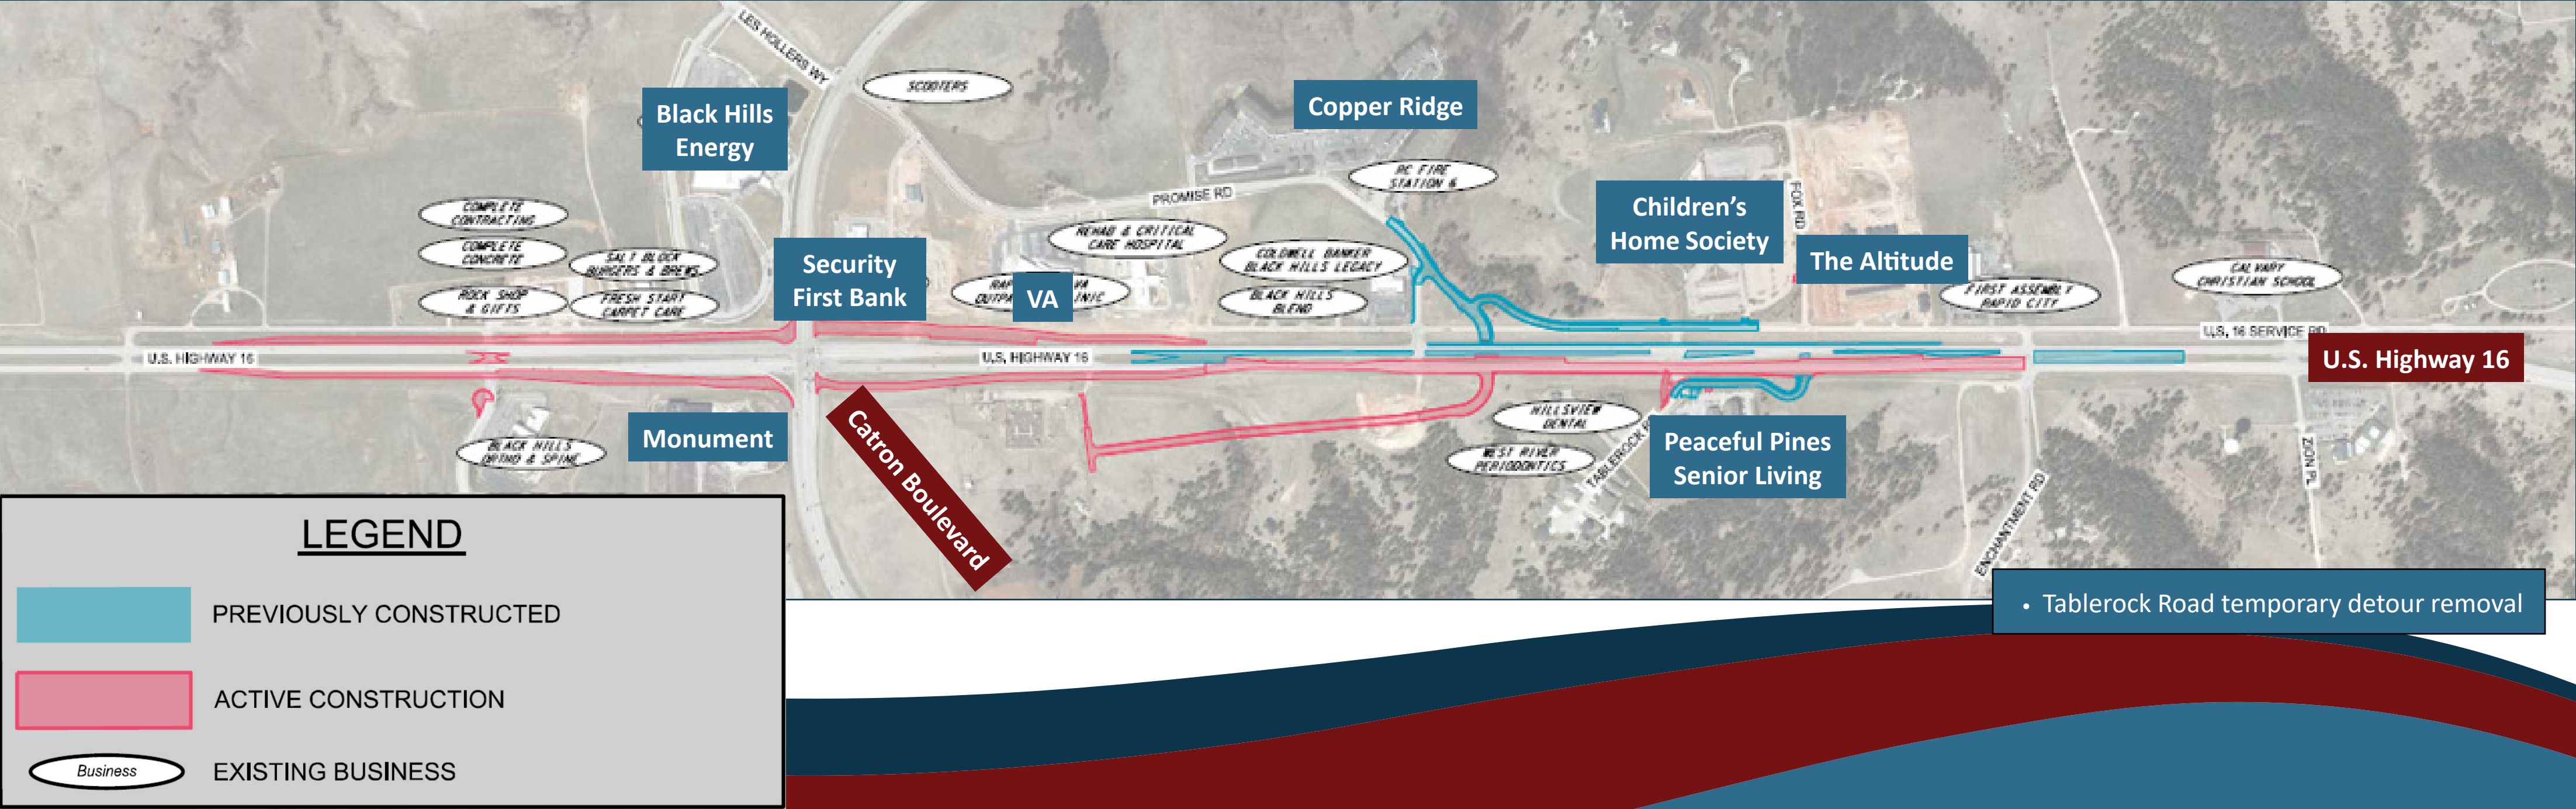

Phase 2B

Work areas and details are tentative and subject to change.

Phase 2C

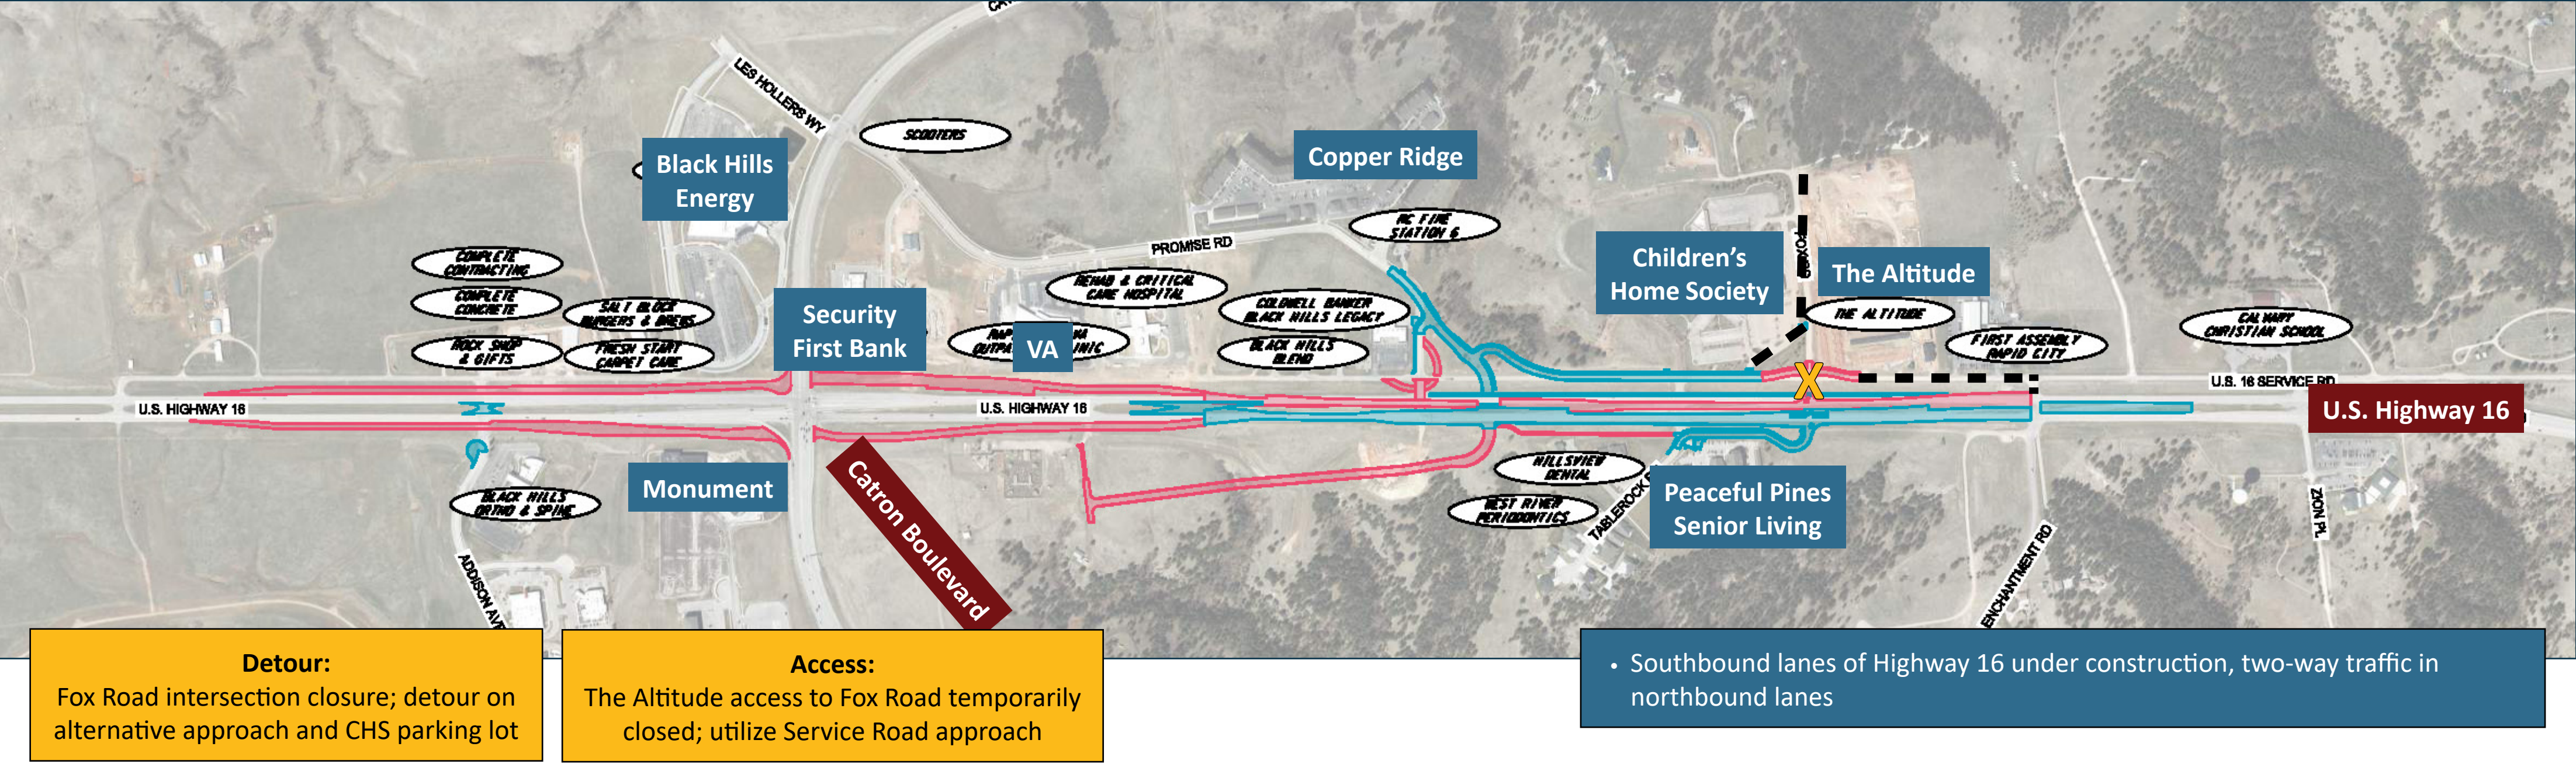

Work areas and details are tentative and subject to change.

Project 1 Phasing

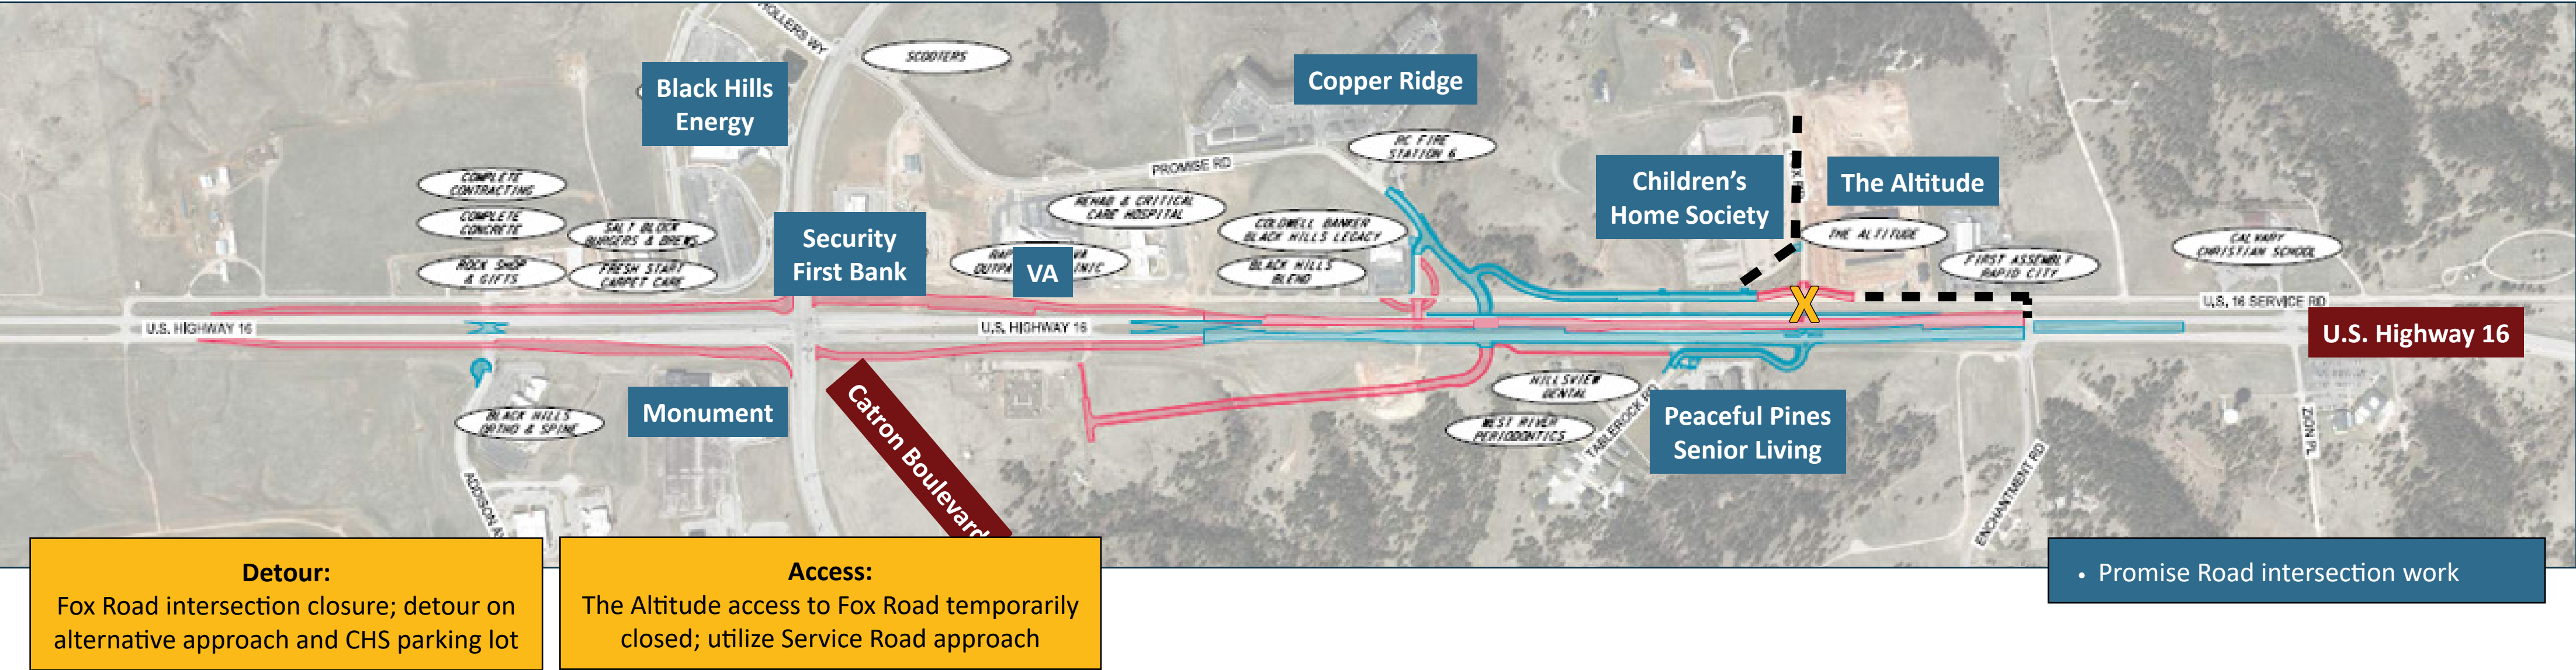

Phase 3A

Work areas and details are tentative and subject to change.

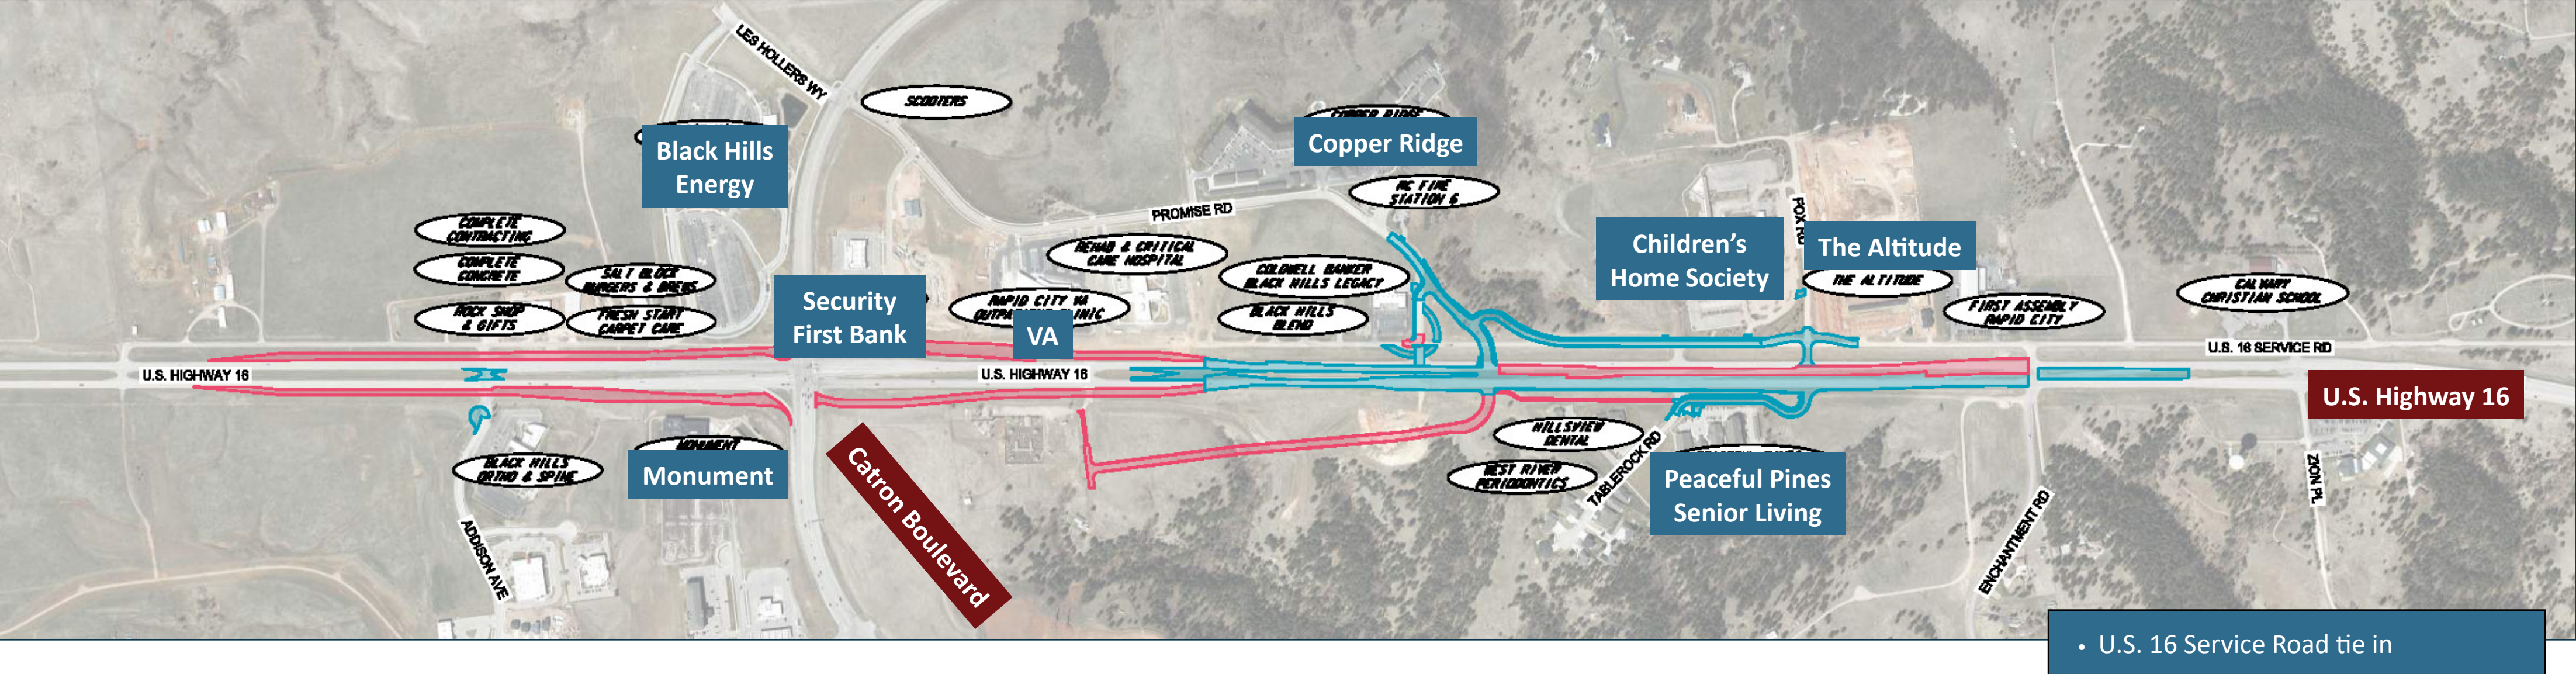

Phase 3B

Work areas and details are tentative and subject to change.

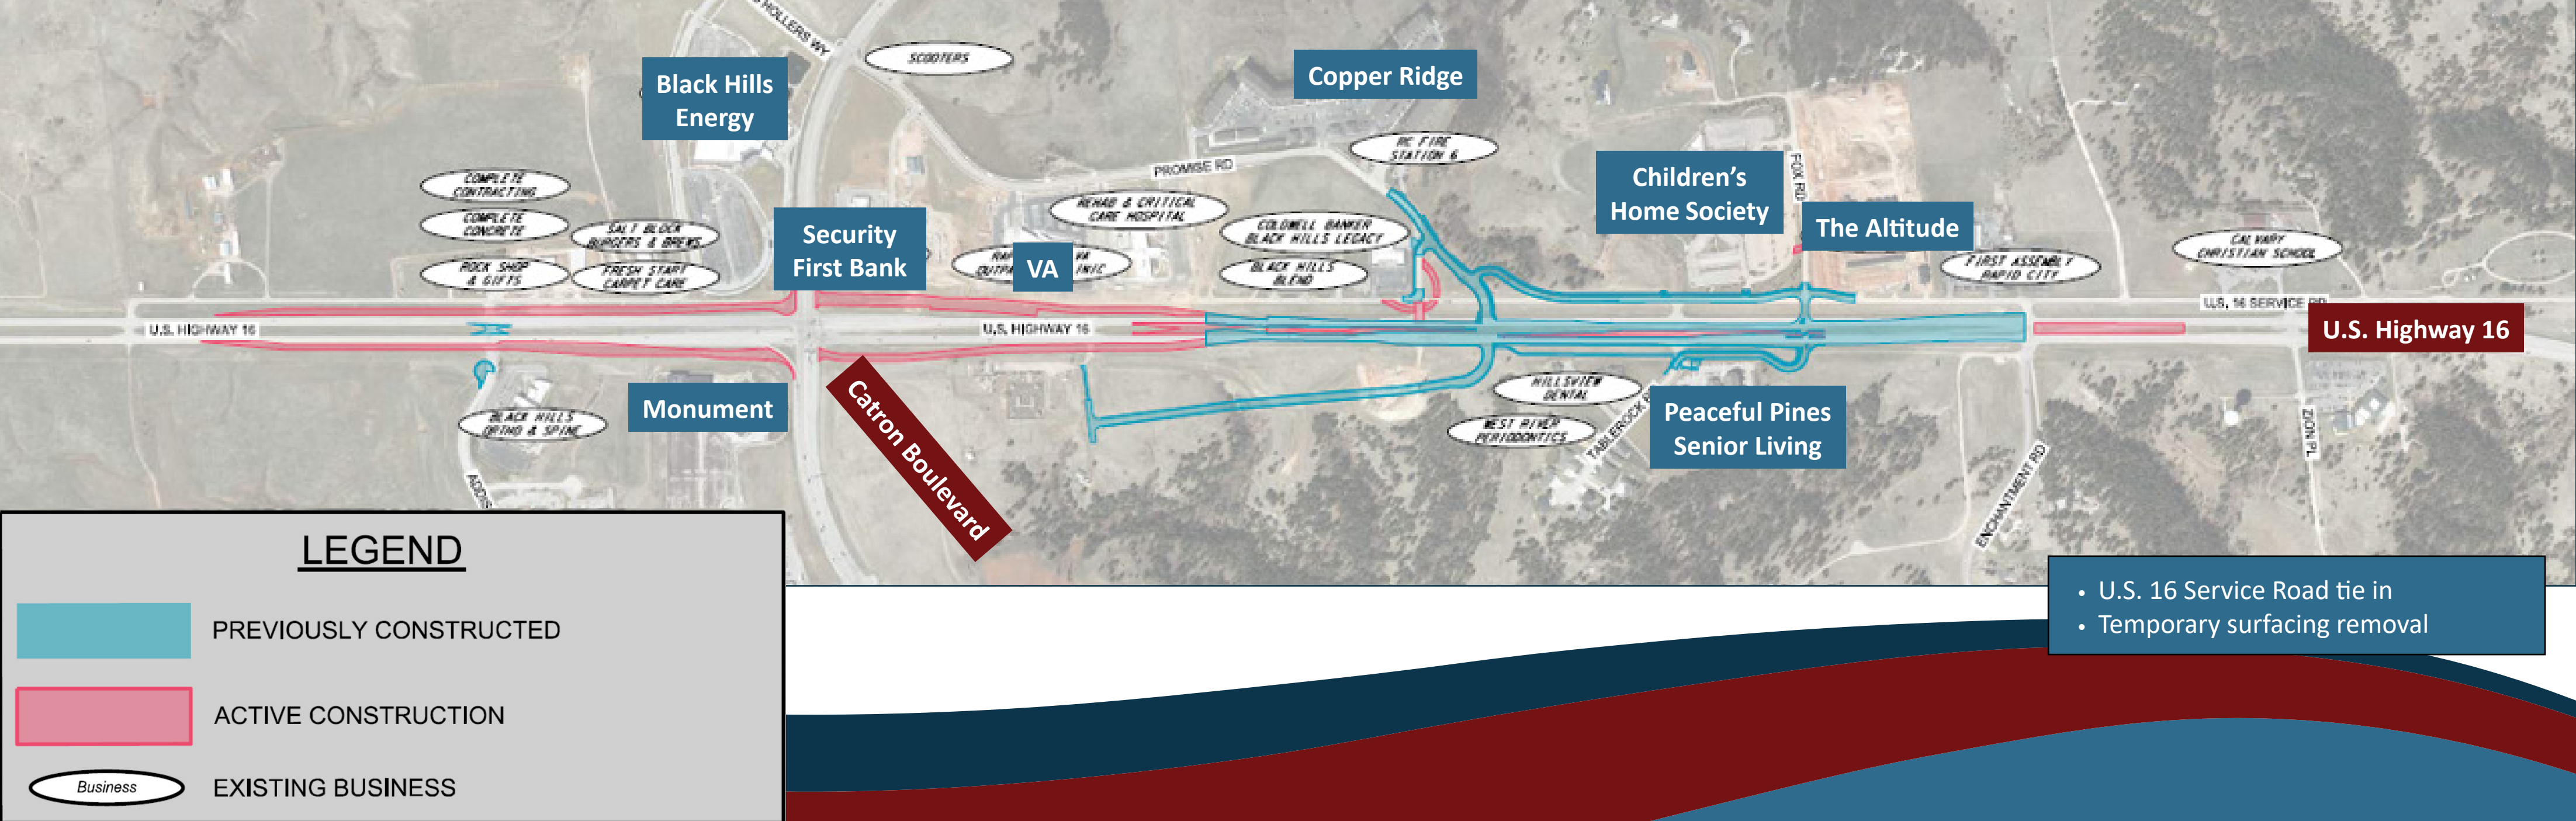

Phase 3C

Work areas and details are tentative and subject to change.

Phase 4

Work areas and details are tentative and subject to change.
