## SECTION 1 INTRODUCTION

This guide is provided to help local agencies put the South Dakota Rural Access Infrastructure Funding program into practice, using guidance and tools developed by an Oversight Group comprising the chairs of the Senate and House Transportation Committees; representatives of counties, townships, and their state associations; and staff of the South Dakota Department of Revenue, the South Dakota Department of Transportation, and the South Dakota Local Transportation Assistance Program.

The guide is organized into 7 sections:

Section	Content
1. Introduction	Document purpose and content; training and resources.
2 Rural Accoss Infrastructure Funding	Enabling legislation and statutes; funding distributions; agency
2. Rufai Access initiasti ucture Funding	and structure eligibility; annual calendar
2 Small Structure Inventory	Processes for collecting, maintaining, and retrieving inventory
S. Small Structure Inventory	data
4. Small Structure Improvement Plans	5-Year Improvement Plan requirements and guidance
5. Funding Applications	Funding application requirements and guidance
	Instructions for using a spreadsheet to verify inventory data
6. RAIF Template Spreadsheet	and to produce documents required for improvement plans
	and grant applications
	Rural Access Infrastructure Funding statutes and legislation;
Appendices	Glossary; Small Structure Inventory items; cross-section areas
	of standard culvert shapes

## 1.1 Resources

Several resources are available assist counties and townships. Many are posted on the websites of the South Dakota Association of County Commissioners and the South Dakota Association of Towns and Townships.

## SECTION 2 RURAL ACCESS INFRASTRUCTURE FUNDING

## 2.1 Legislation and Statute

The 2021 South Dakota Legislature passed House Bill 1259, "An Act to make an appropriation for rural access infrastructure improvement and to declare an emergency"<sup>1</sup>. The intent of the act was to enable counties and townships to inventory their small structures, identify needs, plan improvements, and fund construction, rehabilitation, and maintenance of small structures on township and county secondary roads. The main provisions of the act, enacted in SDCL § 31-34, are summarized at right.

The 2022 South Dakota Legislature passed House Bill 1070<sup>2</sup>, which clarified provisions of SDCL § 31-34 and adjusted dates to better align with agencies' planning, budgeting, and

Provisio	ns of SDCL § 31-34 Rural Access Infrastructure
31-34.1	Defines "small structures"
	Authorizes distribution of \$3M to counties in
21 21 7	2021 to fund an inventory of small structures
51-54.2	Authorizes distribution of \$3M to counties in
	2022 to fund small structure improvements
21 21 2	Lists permissible uses for funding
51-54.5	Limits use to full-maintenance roads
21 21 1	Requires county grant application processes
51-54.4	Requires 80/20 match to RAIF funds
31-34.5	Specifies criteria for grant awards
31-34.6	Specifies township eligibility requirements

21 21 0	Authorizes use of funds for county secondary
51-54.8	roads where a township is unorganized

construction calendars. In 2023, Senate Bill 145<sup>3</sup> passed, allowing flexibility in the deadline for submitting small structure improvement plans in the event of a disaster and removing the requirement that a township assess a tax levy of at least fifty cents per thousand.

The 2024, South Dakota Legislature passed Senate Bill 124<sup>4</sup> to make small structures on minimum maintenance roads eligible for RAIF and Senate Bill 188<sup>5</sup> to require RAIF funds to be spent or obligated by the end of state Fiscal Year 2029. SDCL § 31-34 as of April 1, 2024 is listed along with SB124 and SB188 in Appendix A RAIF Statute and Legislation.

## 2.2 Funding

House Bill 1259 authorized a distribution of \$3 million to South Dakota counties to plan and perform a small structure inventory. The South Dakota Department of Revenue distributed \$3 million in July 2021, according to a method designed to address the collective needs of counties and townships. As recommended by the Oversight Group and authorized by the Secretary of Transportation, the allocation was based on 1) the number of miles of township and county secondary roads in each county; 2) the number of stream crossings on

<sup>&</sup>lt;sup>1</sup> HB1259 An Act to make an appropriation for rural access infrastructure improvements and to declare an emergency, 2021 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/220118.pdf</u>, enacted in South Dakota Codified Law SDCL § 31-34 Rural Access Infrastructure, <u>https://sdlegislature.gov/Statutes/Codified Laws/2079026</u>.

<sup>&</sup>lt;sup>2</sup> HB1070 An Act to clarify certain provisions of the rural access infrastructure improvements grant program, 2022 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/232757.pdf</u>.

<sup>&</sup>lt;sup>3</sup> SB145 An Act to revise provisions pertaining to township eligibility for the rural access infrastructure fund, 2023 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/250901.pdf</u>.

<sup>&</sup>lt;sup>4</sup> SB124 An Act to revise the eligibility of roads for the rural access infrastructure fund, 2024 South Dakota Legislature, Pierre, SD, .<u>https://mylrc.sdlegislature.gov/api/Documents/267111.pdf</u>.

<sup>&</sup>lt;sup>5</sup> SB188 An Act to modify the time before which rural access infrastructure grant moneys must be expended or obligated, 2024 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/266092.pdf</u>.

township and county secondary roads; and 3) a minimum allocation of \$10,000 to every county. HB1259 authorized a second distribution of \$3 million by August 1, 2022, to be made in proportion to the number of small structures they reported in the inventory.

The 2022 South Dakota Legislature passed House Bill 1306<sup>6</sup>, which appropriated an additional \$25 million to be distributed to counties in three equal amounts in FY2023, FY2024, and FY2025, in proportion to the number of inventoried eligible small structures. The first distribution of \$8.33 million occurred simultaneously with the second \$3 million distribution in July 2022.

## 2.3 Permissible Uses

SDCL § 31-34 requires counties to establish a separate fund for deposit of Rural Access Infrastructure Funding. The funds are to be distributed by the board of county commissioners for only the following expenses<sup>7</sup>:

- engineering, hydrological studies, planning, materials, and other costs needed to plan for and complete the projects
- construction, rehabilitation, or replacement of small structures located in townships complying with the requirements of this chapter
- construction, rehabilitation, or replacement of small structures that are described in a county highway and bridge improvement plan and located on county secondary highways

Agencies may use a portion of the funding to maintain their portion of the Small Structure Inventory, as a cost needed to plan for projects. Funding remaining from the first \$3 million allocation after collection of the initial inventory may be used for the purposes listed above. Funding not immediately spent or obligated from a county's fund may be used for up to four years, until reverted pursuant to SDCL § 4-8-21.

Expenditures should be identified and tracked according to sound financial principles in accordance with state audit requirements. The costs of each funded improvement project should be tracked individually.

## 2.4 Agency Eligibility

A township requesting use of rural access infrastructure funds must meet at least one of the following requirements<sup>8</sup>:

- impose an annual property tax levy for the secondary road capital improvement fund pursuant to SDCL § 10-12-28.2; or
- impose a tax levy opt out pursuant to SDCL § 10-13-36.

Counties may use rural access infrastructure funds on county secondary highways if projects are considered in a similar manner as on township highways<sup>9</sup>. Grant applications for county secondary highways must be submitted by the county highway superintendent.

## 2.5 Highway Eligibility

Culverts and small bridges located on township and county secondary roads are eligible for Rural Access Infrastructure Funds. Structures on full maintenance and minimum-maintenance<sup>10</sup> roads are eligible. Structures on no-maintenance roads are not eligible<sup>11</sup>.

<sup>&</sup>lt;sup>6</sup> HB1306 An Act to make an appropriation to rural access infrastructure funds and to declare an emergency, 2022 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/236441.pdf</u>.

<sup>&</sup>lt;sup>7</sup> 31-34-3. Distribution of funds by county--Permissible uses.

<sup>&</sup>lt;sup>8</sup> 31-34-6. Township eligibility--Plan and annual report--Tax requirement.

<sup>&</sup>lt;sup>9</sup> 31-34-8. County use of funds conditioned.

<sup>&</sup>lt;sup>10</sup> Prior to July 1, 2024 structures on minimum-maintenance roads were ineligible.

<sup>&</sup>lt;sup>11</sup> 31-34-3. Distribution of funds by county--Permissible uses.

Figure 2: Small Structure Definition

## 2.6 Structure Eligibility

South Dakota Codified Law § 31-34-1 defines a small structure as "any small bridge or culvert with an opening of sixteen square feet or more located on a township road or county secondary road, excluding bridges as defined in § 31-14-1". SDCL § 31-14-1 in turn defines a bridge to be "a structure, including supports, erected over a depression or an obstruction, as water, highway, or railway, the structure having a length measured along the center of the roadway of more than twenty feet between undercopings of abutments or extreme ends of openings for multiple boxes and pipes where the clear distance between openings is less than half of the smaller contiguous opening". Together, the two sections of codified law define the secondary road structures that qualify as "small structures" eligible for Rural Access Infrastructure Funds (Figure 2). Figure 3 shows example configurations that do and do not qualify as small structures under SDCL § 31-14.

## 2.7 Individual Culverts and Culvert Groups

The language of SDCL § 31-34-1 allows box or pipe culverts to meet the 16 square foot opening requirement two ways:

- An individual culvert may have an opening of at least 16 square feet. Examples include a box culvert with a single 54" x 54" opening (20.2 ft<sup>2</sup>), a box culvert with two 36" x 36" openings (18 ft<sup>2</sup> total), or a 60" round pipe (19.6 ft<sup>2</sup>). (Cross-section areas of standard culvert shapes are listed on page 56.)
- A group of culverts lying in the same drainage may have a combined total opening of at least 16 square feet. Examples include a pair of 48" round pipes (25.2 ft<sup>2</sup>) and a group of three 36" round culverts (21.3 ft<sup>2</sup>).

Within a group of culverts lying in the same drainage, individual pipes that meet the 16 square foot opening requirement may be considered separate small structures. For example, a pair of 60" round pipes in the same drainage qualifies as two small structures.

## 2.8 Annual Calendar

The Rural Access Infrastructure Funding process comprises four interrelated activities (Figure 4):

- distribution of funds to counties
- creation and maintenance of a statewide small structure inventory (SECTION 3 Small Structure Inventory, page 11)
- development of small structure improvement plans (SECTION 4 Small Structure Improvement Plans, page 18)
- application and award of small structure improvement grants (SECTION 5 Funding Applications, page 24)

The calendar of Figure 4 lists significant annual milestones:

- May 31: the number of small structures currently inventoried in each county is used as a basis for the next RAIF distribution
- August 1: deadline for the SD Department of Revenue to make RAIF distribution to counties
- August 31: small structure improvement plans are due to the county board of commissioners
- October 31: small structure grant applications are due to the county board of commissioners, unless the deadline is extended due to a county disaster<sup>12</sup>
- January 15: deadline for county board of commissioners to award small structure grants

This annual calendar extends through the distribution and expenditure of the FY2024 and FY2025 funding distributions.

<sup>&</sup>lt;sup>12</sup> SB145 An Act to revise provisions pertaining to township eligibility for the rural access infrastructure fund, 2023 South Dakota Legislature, Pierre, SD, <u>https://sdlegislature.gov/Session/Bill/24217</u>.

## **SECTION 3 SMALL STRUCTURE INVENTORY**

To be eligible for Rural Access Infrastructure Funding, counties and townships must inventory their small structures. To encourage a consistent and objective statewide inventory that meets the intent of SDCL § 31-34, the Oversight Group directed development of a *Small Structure Inventory Handbook* to clarify the definition of "small structure", describe the inventory process, and define the information to be collected. The handbook is available as a spiralbound booklet from the South Dakota Department of Transportation's Local Government Assistance Program and online at <u>http://sdtownships.com</u> and <u>https://sdcountycommissioners.org</u>.

Local agencies collected the original inventory information using three tools developed specifically for the small structure inventory:

- an Esri<sup>13</sup>-based geographic information system app for mobile phones and tablets (Section 3.1)
- a Microsoft Excel spreadsheet for laptop or desktop computers (Section 3.2)
- paper forms, which were entered later into the Excel spreadsheet (Section 3.3)

*Figure 5: Small Structure Inventory Handbook* 

All three methods recorded information in the order and format described in the *Handbook*. All inventory items are listed in APPENDIX C Small Structure Inventory Items, page 54.

Although the inventory *Small Structure Inventory Handbook* and collection tools are designed to allow county staff, township supervisors, consultants, planning districts, and others to perform the inventory, each county and its townships may determine how best to administer, perform, and pay for the work according to their individual requirements and capabilities.

Some agencies have used the inventory to record culverts and bridges that do not qualify as small structures under SDCL § 31-34. This practice is acceptable as long as ineligible structures are not mistaken as eligible.

## 3.1 Mobile Data Collector App

The **South Dakota Small Structure Inventory** mobile app is based on the Esri geographic information system platform (*Field Maps* or *Collector* for ArcGIS). Users must have an ArcGIS Online account to use *Field Maps* or *Collector* on their mobile phone or tablet. Users must also contact the South Dakota Department of Transportation Geographic Information Systems Coordinator (<u>kimberly.zerr</u> @state.sd.us</u>) to be authorized to use the app.

Using the mobile app makes acquiring inventory information—such as latitude, longitude, and photographs of small structures—easier, as most mobile devices have global positioning and cameras. Information

Figure 6: Small Structure Inventory Mobile App

entered into the mobile app during the initial inventory is saved directly to the Statewide Small Structure Inventory, as is information entered later to update or correct the inventory. Instructions for using the app are posted at <u>http://sdtownships.com</u> and <u>https://sdcountycommissioners.org</u>.

<sup>&</sup>lt;sup>13</sup> Esri, formerly Environmental Systems Research Institute, a geographic information system software company.

#### 3.2 Inventory Spreadsheet

Although some agencies used the South Dakota Small Structure Inventory Spreadsheet to capture their initial small structure inventory, it can no longer be used to collect or update the inventory. <u>Beginning in</u> <u>August 2022, all corrections and updates to the South Dakota Small Structure Inventory must be made</u> <u>using the Mobile Data Collector App</u> (Section 3.1, page 11). Agencies must either license the Mobile Data Collector App or obtain assistance from another licensed user.

#### 3.3 Paper Inventory Forms

Prior to 2022, local agencies could use paper forms to record inventory information. Two forms—one for box and pipe culverts and another for small bridges—were available. Now that the inventory is in place, the inventory must be collected using the Mobile Data Collector App.

#### 3.4 Small Structure Number

The Small Structure Number is the primary means to identify a structure in the inventory and retrieve its inventory information. When a structure is entered into the Small Structure Inventory, it is assigned a permanent, unique identifier based on the county number, the distance east of the county's westmost point, and the distance south of the county's northmost point.<sup>14</sup> To avoid duplicate Small Structure Numbers, the distances of closely spaced structures may be artificially incremented by a hundredth of a mile.

CC	2-digit county number		
~~~~~	4-digit distance from the westmost point in the county, in hundredths of miles	NN.NN WW.WW Pennington County Example	Small Structure Number CC – WWWW – NNNN
NNNN	4-digit distance from the northmost point in the county, in hundredths of miles		

Figure 7: Small Structure Number Calculation

## 3.5 Small Structure Inventory Database

All information submitted via the Small Structure Inventory Collector or Small Structure Inventory Spreadsheets is stored in a publicly accessible statewide geospatial database hosted by the South Dakota Department of Transportation.<sup>15</sup> The South Dakota Small Structure Inventory displays a zoomable map (Figure 8) showing the locations of culverts and small bridges by orange circle and red squares, respectively. Clicking on a circle or square opens a window showing the information for that small structure (Figure 9). Inventory information can also be viewed in the table below the map. Culvert data and small bridge data are displayed in two separate tabs.

r =

<sup>&</sup>lt;sup>14</sup> This method is similar to how SDDOT numbers bridges in the National Bridge Inventory, but the Small Structure Number uses 4 digits to designate distance in hundredths of miles, while the NBI Structure Number uses only 3 digits to designate distance to tenths of miles. Also, the Small Structure Number is calculated strictly from distance, while NBI Structure Numbers shift to follow range and township correction lines.

<sup>&</sup>lt;sup>15</sup> https://sdgis.sd.gov/portal/apps/webappviewer/index.html?id=110201c952074157afd8a57fed789a58.

#### 3.6 Filtering Inventory Data

Agencies can filter the data to display only the structures that belong to their agency or that satisfy other criteria. For example, the **T** Filter tool can be used to select only the culverts belonging to Henry Township in Codington County (Figure 10). The same technique can be used to select small bridges.

	Filter	$\times$
Culvert Small Bridge	+ Add expression + Add set Display features in the layer that match all of the following expressions	*
Options V Filter by map Show selected records	Item 1 County Nam- V is CODINGTON V	: ×

	OK Cancel	

Figure 10: Using the Filter Tool to Select Culverts of Interest

#### 3.7 Exporting Inventory Data

Comma Separated Value (.csv) text files—one for culverts and another for small bridges—can be exported from the Small Structure Inventory by selecting the Export all to CSV tool. The .csv file can then be imported into Excel spreadsheets or other software for analysis. Figure 11 shows the first ten items of data exported to a .csv file and then imported into Excel for four culverts lying in Henry Township. Item 10 is the culvert's unique Small Structure Number.

									Export all	to CSV

Figure 11: Excel Spreadsheet of Culverts in Henry Township of Codington County

#### 3.8 Exporting Inventory Photographs

Photographs collected during the inventory process can also be retrieved from the database. Photographs can be viewed, copied, or saved for use in other documents by clicking on the .jpg filename at the far-right side of the scrollable table (Figure 8) or in the Data Window (Figure 9).

The inventory accommodates five digital photographs for each small structure:

- roadway approaching and crossing the structure
- upstream channel
- structure inlet
- structure outlet
- downstream channel

## 3.9 Editing Data in the Small Structure Inventory

Because the Rural Access Infrastructure Fund program will continue at least through state fiscal year 2025, local agencies must continue to update their inventories. Missing or inaccurately reported information may skew funding distributions and investment decisions and undermine confidence in the program.

Changes that affect funding eligibility—such as highway system assignment (county primary, county secondary, or township) or maintenance level (full, minimum-, or no-maintenance)—are particularly important. Beginning in July 2022, small structures must be accurately inventoried by May 31 to count toward the annual distribution of Rural Access Infrastructure Funding made each July.

Changes in culvert or small bridge condition due to damage, deterioration, repair, replacement, rehabilitation, or removal should be updated as they occur. Such changes will affect agencies' small structure improvement plans and funding priorities.

Discrepancies between the information in the Small Structure Inventory and physical reality should be corrected as soon as they are discovered. Corrections are necessary because:

- the mobile app and spreadsheet used to collect the original inventory have limited ability to check validity as data is being entered; some checks are only possible after the data has been submitted
- individuals who performed the inventory may have interpreted inventory instructions differently
- important data items may have been missed
- some data items may have been reported inaccurately

All corrections must be entered into the Small Structure Inventory, which is the definitive repository for culvert and small bridge data.

#### 3.9.1 Editing Small Structure Data Using the ESRI Collector or Field Maps App

Inventory data in the Small Structure Inventory geospatial database can only be edited using the mobile app.

- Open the Small Structure Inventory Collection Map in ArcGIS Collector or Field Maps.
- Locate the structure on the map and tap on it to open the attributes (Figure 12).
- Tap on the pencil at the bottom of the attribute box to begin editing.
- Edit appropriate field data and photos.
- Tap Update Point to save your edits, then Submit (Figure 13).
- Edits will be immediately stored in the statewide geographic database.

Figure 12: Small Structure Inventory Mobile App Map

Contact Kimberly Zerr at 605.773.3402 or <u>kimberly.zerr@state.sd.us</u> for assistance if needed.

Figure 13: Saving Edited Data with the Mobile App

## 3.9.2 Searching the ESRI Collector or Field Maps App Structures by Small Structure Number

With the ESRI Collector or Field Maps mobile apps, it is also possible to use the search bar to find a structure.

• In the upper right-hand corner of the screen, tap the magnifying glass icon to open the search bar (Figure 14).

Figure 14: Small Structure Inventory Mobile App Screens

- Type in the Small Structure Number and tap Search on the keyboard. Remember to include the hyphens when searching. You can also search by partial structure number. This will pull up a list of all matching structures (Figure 15).
- Tap on the desired structure to select it and open its details. From here, you can tap the edit icon to change the structure's information.

Figure 15: List of Structures to Select for Editing

## SECTION 4 SMALL STRUCTURE IMPROVEMENT PLANS

To be eligible to receive funding from the Rural Access Infrastructure Fund, a township must submit a small structure improvement plan and any updates to the highway superintendent of the county the township lies in<sup>16</sup>. The guidance in this section specifically targets requirements that apply to township plans.

SDCL § 31-34.3 and § 31-34.8 suggest similar requirements for counties intending to use Rural Access Infrastructure Funds for county secondary roads<sup>17</sup>. The guidance in this section can be used to develop a section to incorporate small structures in the county's highway and bridge improvement plan.

Agencies should use their improvement plans to respond to and budget for needs and priorities identified by public leaders, staff, and the public. Transportation planning should encourage involvement by all users of the system, such as agricultural operators, businesses, community groups, freight operators, and the general public through a proactive public participation process. The process should foster communication among local agencies to jointly discuss transportation needs and coordinate improvements.

Agencies' improvement plans should examine both short- and long-term needs. While it is often necessary to invest in urgent repair of structures in the worst condition, it may be more cost-effective to allocate some funding to preservation and repair of structures in better condition. A balanced strategy may serve an agency's needs most effectively. If no capital improvement projects are planned during the next five years, the plan may include a project with the improvement "Maintenance/Repair" listed.

Agencies may also propose projects specifically for engineering, planning, studies, and other work needed to plan for physical work. For example, structural analysis may be needed to determine whether repair or rehabilitation of a small bridge is feasible or whether replacement is necessary. Similarly, a hydrological study may help determine whether culverts in a flood-prone location should be resized. Hydrological studies are strongly recommended whenever culvert resizing is contemplated. Such studies may be proposed as a distinct project in advance of the actual rehabilitation project.

Improvement plans should also balance investment costs and timing against the anticipated revenue available for highway and bridge use.

Plans are to be updated annually and submitted to the county board of commissioners by August 31 each year. A township or county may amend or update its Small Structure Improvement Plan at any official board meeting. Amendments that impact a potential funding application should be sent to the County Highway Superintendent to ensure that the changes appear in the plan before funding applications are submitted.

## 4.1 Plan Content

SDCL § 31-34.6 and § 31-34.7 require township and county small structure improvement plans to include<sup>18</sup>:

- one or more maps showing the small structures within the jurisdiction (Section 4.2)
- inventory information including location, dimensions, condition, and load postings (Section 4.3)
- a list of proposed projects to be performed during the next five years, including locations, costs, funding sources, and construction years (Section 4.4)

Townships must attach a copy of their most recent annual financial report (Section 4.5).

<sup>&</sup>lt;sup>16</sup> 31-34-7. Township eligibility--Contents of plan--Updates.

<sup>&</sup>lt;sup>17</sup> 31-34-8. County use of funds conditioned

<sup>&</sup>lt;sup>18</sup> 31-34-7. Township eligibility--Contents of plan--Updates.

## 4.2 Small Structure Maps

Improvement plans must include one or more maps showing the location of all small structures within the county or township.

Agencies may supply maps they have created themselves or maps generated by the statewide Small Structure Inventory geographic information system.

The map of Figure 16, showing the small structures in one township in Union County, was clipped from a zoomed-in screen display of the Small Structure Inventory website<sup>19</sup>. At this map scale, Small Structure Numbers are displayed.

Figure 16: Map of 17 Culverts and 1 Small Bridge in Alcester Township, Union County

## 4.3 Inventory Information

Small structure improvement plans must list:<sup>20</sup>

- the location, width, and length of each small structure
- a report on the condition of each small structure
- whether the small structure is posted for load capacity and, if so, the posted limits

The Small Structure Listing in Figure 17 lists the information required for small bridges in Aurora County in order of Small Structure Number.

County:	AURORA	Townships:	A	LL			Systems:	ALL

Figure 18: Partial Summary Listing of Culverts in Aurora County

The Small Structure Listing report templates for culverts and small bridges are included along with instructions for their use in the RAIF\_Templates spreadsheet provided by SDDOT (Section 6.5).

If agencies prefer, they may develop their own reports from the CSV files exported from the Small Structure Inventory, provided they supply the information required by SDCL § 31-14 and are acceptable to their county boards of commissioners.

## 4.4 Proposed Projects List

Small structure improvement plans must include a list of all small structure improvement projects proposed to be undertaken by the agency during the next five years. All projects for which applications for Rural Access Infrastructure Funds will be submitted must appear in the proposed project list. For each project, SDCL § 31-34 requires the list to include: <sup>21</sup>

- the location of the project
- type of project (structure replacement, rehabilitation, maintenance, or engineering)
- estimated cost of the project
- sources of funding for the project
- the year the project is proposed to be accomplished

The Proposed Projects List shown in Figure 19 lists the required information at an appropriate level of detail.

Figure 19: Five-Year Prioritized Project List Form

If the Proposed Project List is generated by the RAIF\_Templates spreadsheet, information relating to the structure's identification and location is populated from the Small Structure Inventory. If not, the information can be entered manually.

The general categories of improvement type are selected by checkboxes. Additional description of the work should be provided as remarks.

The preparer must provide an estimate of total cost for the proposed work. In early stages of planning, estimates may be approximate, especially for projects planned farthest in the future. Although estimates may be based on experience, generic cost assumptions, or preliminary design concepts, they should realistically represent anticipated costs. Estimates should improve as planning progresses. They should ultimately be based on engineers' estimates of actual design for projects that will included in an imminent funding application. Especially for costly or complex projects, more refined estimates will reduce the risk of seriously under- or over-estimating costs.

The preparer must also identify anticipated funding amounts by funding source, including Rural Access Infrastructure Funding. A portion of a future project may be shown as unfunded or include funding sources that have not yet been received. Projects that cannot be funded with current revenue should be included in the Proposed Project List and updated when funding becomes available.

The township or county must provide at least twenty percent of the funding necessary to complete the project.

## 4.5 Annual Financial Report

Small Structure Improvement Plans from townships must include a copy of the township's most recent Annual Financial Statement required by SDCL § 8-10-30<sup>22</sup> (Figure 20).

Figure 20: Township Annual Financial Statement Required by SDCL § 8-10-30

<sup>&</sup>lt;sup>22</sup> 31-34-6. Township eligibility--Plan and annual report--Tax requirement.

## SECTION 5 FUNDING APPLICATIONS

SDCL §§ 31-34.4 and 31-34.5 require counties to establish a funding application process that considers stipulated criteria for awarding Rural Access Infrastructure Funding for small structure improvement projects on township and county secondary roads. Each county should clearly define and document its processes for accepting and evaluating grant applications and awarding grants, to ensure that all applicants can compete equally and to avoid contested decisions later.

Townships must submit funding applications to the board of county commissioners on or before October 31, unless the deadline is extended due to a county disaster<sup>23</sup>, on forms prescribed by the association of county commissioners<sup>24</sup>. Funding applications for county secondary roads must be submitted by the county highway superintendent.

The board of county commissioners must award funds no later than January 15.

#### 5.1 Application Content

SDCL § 31-34.4 requires a funding application to include:

- a copy of the resolution by the township board of supervisors authorizing the application (Section 5.2)
- an application form prescribed by the Association of County Commissioners (Section 5.3).

## 5.2 Application Approval Resolution

Applications from townships must be accompanied by a resolution (Figure 21) approved by the township board of supervisors authorizing the application and any funding commitments made by the township. The combined township and county share must be at least twenty percent of the funds necessary to complete each project.

Resolution Approving a Rural Access Infrastructure Funding Application	
The Township Board hereby approves the attached Rural Access Infrastructure Funding Application and acknowledges that it complies with South Dakota Codified Law 31-34-7.	
Approved this day of, 202

<sup>&</sup>lt;sup>23</sup> SB145 An Act to revise provisions pertaining to township eligibility for the rural access infrastructure fund, 2023 South Dakota Legislature, Pierre, SD, <u>https://sdlegislature.gov/Session/Bill/24217</u>.

<sup>&</sup>lt;sup>24</sup> 31-34-4. Application process.

## 5.3 Application Form

SDCL § 31-34 requires RAIF applications to be submitted on forms prescribed by the South Dakota Association of County Commissioners.

The forms shown for culverts in Figure 22 and for small bridges in Figure 23 contain the information that boards of county commissioners must consider in a format that can be conveniently evaluated. If generated by the RAIF\_Templates spreadsheet (Section 6.7), information relating to structure location, description, and overall condition is automatically populated from the Small Structure Inventory. Otherwise, the information can be entered manually.

SDCL § 31-34 requires a significant amount of information in addition to what is available from the Small Structure Inventory. The preparer must add information about the traffic uses, traffic counts (if available), and the public safety and hydrological impacts of the proposed work.

Next, the preparer must describe the proposed work by marking applicable checkboxes of work types and providing explanatory comments. The information should provide describe the work in sufficient detail to enable the board of county commissioners to understand its nature and magnitude. Cost estimates for grant applications should be based on actual design. If done for each facet of the project, engineers' estimates represent a reasonably accurate project cost suitable for the RAIF application.

The next section of the form requests funding amounts by funding source and an explanation of the funding strategy and any constraints. Total funding should equal the total estimated cost. The county or township share must equal at least 20% of the total funding.

Finally, townships must certify that they satisfy eligibility requirements by imposing a tax levy or opt-out. The submitter must sign and date the application.

## 5.4 Criteria for Award

The board of county commissioners must verify the eligibility of the proposing agency, the road, the small structure, and the proposed work according to the criteria presented in Sections 2.3 through 0 of this document.

SDCL § 31-34 additionally requires the board to consider the following criteria in awarding rural access infrastructure grants<sup>25</sup>:

- traffic use of the highway
- residential, commercial, recreational, and other uses of the highway
- length of detour if the project is not completed
- number of residences, farms, and ranches served by the project
- whether the highway terminates into a field entrance, driveway, single residence, farm, or ranch
- public safety
- hydrological impact
- cost of the project
- contribution from township or others to the project
- ability of the township to fund the project without using the rural access infrastructure fund
- the application, or group of applications, that best serves the citizens of South Dakota

The board may consider any other matters it deems applicable. Decisions of the county commissioners are final and non-appealable, but a denied application may be resubmitted and reconsidered in a subsequent year.

<sup>&</sup>lt;sup>25</sup> 31-34-5. Criteria for award.

Figure 23: RAIF Improvement Funding Application (Small Bridge)

## SECTION 6 RAIF TEMPLATE SPREADSHEET

Although CSV files exported from the Small Structure Inventory (Figure 11, page 14) contain the complete information collected in the inventory, they are not convenient for human viewing. To make the information more readable, CSV files can be imported into an Excel workbook set up to generate formatted reports.

To help local agencies use the inventory data more easily, the South Dakota Department of Transportation developed an Excel workbook that can import culvert and small bridge information from the South Dakota Small Structure Inventory. The Excel workbook, named RAIF\_Templates.xlsm (with optional characters to identify jurisdiction name or date), generates documents required for the 5-Year Small Structure Improvement Plans (SECTION 4) and the RAIF funding applications (SECTION 5). The workbook includes worksheets for these functions:

Worksheet	Function	See Section
Import Culverts	Import culvert and small bridge data from the South Dakota	Soction 6 1
Import Bridges	Small Structure Inventory	Section 6.1
Culverts	List all culverts, identify missing and questionable data	Section 6.2
Small_Bridges	List all small bridges, identify missing and questionable data	Section 6.3
Culvert Detail	Generate detailed reports for individual culverts and small	Saction 6.4
Bridge Detail	bridges	Section 6.4
Culvert Summary	Generate lists of small structures by county, township, or	Soction 6 E
Bridge Summary	road system	Section 6.5
Improvement list	Generate a Project List for the 5-Year Small Structure	Soction 6 6
improvement List	Improvement Plan	Section 6.6
<b>Culvert Application</b>	Generate RAIF funding applications for culverts and small	Soction 6 7
Bridge Application	bridges	Section 6.7

#### Table 1: Excel Worksheet Names and Functions

The Excel workbook requires that macros be enabled on the user's computer, to allow custom coding in the spreadsheet to operate (see Section 6.8). Each worksheet includes user instructions.

Questions about the Excel workbook should be directed to Dave Huft, South Dakota Department of Transportation (<u>dave.huft@state.sd.us</u> or 605.773.3358).

## 6.1 Import Small Structure Data

Two spreadsheet tabs—**Import Culverts** and **Import Bridges**—guide the user to export culvert and small bridge data from the South Dakota Small Structure Inventory and then import it into the Excel workbook. The overall process is depicted in Figure 24.

## Figure 24: Export from South Dakota Small Structure Inventory into RAIF\_Templates.xlsm Workbook

Instructions listed in the **Import Culverts** worksheet (Figure 25) provide step-by-step directions for importing a county's culvert data from the South Dakota Small Structure Inventory.

Import Culverts Worksheet Instructions	
To use any functions of this Excel workbook, you must first import c inventory data from the South Dakota Small Structure Inventory. To acc this link:	ulvert and small bridge ess the inventory, click on
https://sdgis.sd.gov/portal/apps/webappviewer/index.html?id=110201c	952074157afd8a57fed789
To export culverts from the Small Structure Inventory, select the Small Structure Inventory <b>Culvert</b> tab and then click on the <b>Filter</b> option.	Culvert Small Bridge Culvert Small Bridge Culvert Filter by map ext Show selected records Show related records Filter Show/Hide columns Export all to CSV
Filter X	It is highly recommended to select only your
+ Add expression + Add set	county. Click on Add
Display features in the layer that match the following expression	County Name, and then
Case sensitive	select your county from
	appears. Click <b>OK</b> to
	complete your selection.
Return to <b>Culvert</b> , and click on <b>Export all to CSV</b> option. The South Dakota Small Structure Inventory website will export a Comma Separated Value (CSV) file named Culvert, possibly with a number in parentheses, to the <b>Downloads</b> directory of your computer. This is the file that you will import into this spreadsheet.	Culvert Small Bridge Culvert Small Bridge Show selected records Show related records Filter Show/Hide columns Export all to CSV
Click on the Import Culverts button at right. When you are asked to select a file to import, select the CSV file that was exported from the Small Structure Inventory. The spreadsheet will import the data into the Culverts tab of this workbook, where it will be available to all report templates.	Import Culverts
Depending on the number of culverts in your county, this operation may take a couple of minutes to complete. Wait patiently for the hourglass symbol ( $\overline{\mathbb{Z}}$ ) to disappear and the screen to return to this worksheet.	

Figure 25: Insert Culverts Worksheet in the RAIF\_Templates Workbook

The **Import Bridges** worksheet similarly imports a county's small bridge data from the South Dakota Small Structure Inventory.

## 6.2 Culvert Inventory and Data Checks

The import process described in Section 6.1 copies culvert data from the South Dakota Small Structure Inventory into the **Culverts** worksheet in order of Small Structure Number. The **Culverts** worksheet consists of two distinct areas.

The right section of the worksheet (Figure 26, Columns AI – CP, normally shown in white cells, contains the culvert data imported from the South Dakota Small Structure Inventory, listed in order of Small Structure Number. This data may be altered, but <u>changes made in the spreadsheet do not propagate back to the SD</u> <u>Small Structure Inventory</u>. To be permanent, changes must be entered directly into to the SD Small Structure Inventory.

Within this area, missing values are shaded light orange and questionable values are highlighted in other colors. Agencies should strive to identify the nature of the errors and make corrections in the SD Small Structure Inventory. After corrections are made, the Import Culverts process can be repeated to keep the worksheet consistent.

AI	AJ	AK	AL	AM	AN	AO	AP	AQ	AR	AS	AT

Figure 26: Columns AI – CP contain the culvert data reported in the Small Structure Inventory

The left section of the worksheet (Figure 27), Columns A – AH, shown in colored cells, contains formulas that:

- Check whether the culvert locations, as determined from the reported latitude and longitude, lie near their reported Road Systems.
- Indicate whether the reported Maintenance Level qualifies the structure for the Rural Access Infrastructure Fund. Only Full Maintenance roads are eligible.
- Identify closely spaced culverts that can be considered as culvert groups for purposes of determining culvert cross-section area.

These formulas should not be altered in any way.

*Figure 27: Columns A – AH Check Data Reported in the Small Structure Inventory* 

#### 6.2.1 Road System

Column A **Reported System** reflects the Road System (*Item 3, Column AK*) reported in the Small Structure Inventory.

Columns B – G **Structure Maps to GIS Road Systems** indicate whether the culvert maps to a Road System other than that reported in the inventory, based on the reported Latitude (*Item 8, Column AP*) and Longitude (*Item 9, Column AQ*) and data on record in the South Dakota Department of

Figure 28: Columns A – H Check for Road System Misidentification

Transportation's Geographic Information System (GIS) when the Excel workbook was published, listed in cells B1 – G1.

Figure 28 illustrates the rules used to check the road system. The reported road system is accepted if it matches any of the possible GIS road systems (Rows 3 and 6 – 8). If no road system is reported (Row 4), or if the culvert clearly lies along a road system different from what was reported (Row 5), the highway system listed in the GIS is used instead.

Column H **Eligible System** indicates whether the Road System is eligible for RAIF funding. Township and County Secondary roads are eligible and are listed as Yes. Roads on the County Primary system are not eligible and are listed as No and shaded pink.

## Action Required:

- Verify that the Road System is reported for every structure.
- Determine the correct Road System for any structure that maps to a system different from the Reported System.
- If the Road System is incorrectly reported in the Small Structures Inventory, correct the entry.
- If the Road System is correctly reported and SDDOT's local road inventory may be wrong, please contact Greg Pollreisz at 605.773.6645 or greg.pollreisz@state.sd.us to resolve the question.

#### 6.2.2 Maintenance Level

Column I **Highway Maintenance Level** reflects the Road Maintenance Level (*Item 12, Column AT*) reported in the Small Structure Inventory. Only structures on Full Maintenance and Minimum Maintenance roads, such as those in Rows 3 – 16 in Figure 29, are eligible for RAIF funding. Structures on No Maintenance, such as Rows 17 – 18, are not eligible and are shaded pink.

#### Action Required:

• Verify that the reported Highway Maintenance Level is correct. Edit the item in the Small Structure Inventory if necessary.

Figure 29: Column I Indicates Maintenance Level Eligibility for RAIF

#### 6.2.3 Culvert Groups

Columns J – X deal with groups of culverts (Figure 30). Grouping is necessary because the provisions of SDCL § 31-41 allow the opening size requirement to be met by either:

- a single culvert with an opening of at least 16 square feet
- a group of culverts serving the same drainage with a combined opening of at least 16 square feet

	J	K	L	М	N	0	P	Q	R	S	Т	U	V	W	Х	Y	Z	AA	AB	AC	AD	AE	AF	AG	AH

69	1		67	05-1073-0705	946.2	0	70	05-1110-0803	5573.0	0	61	61	1	69	05-1090-0700	1	96	1	1	96	0	0	0	1	

Figure 30: Columns J – X Identify Culvert Groups

Column J **Seq #** reflects the reported Sequence Number (*Item 5, Column AM*). A Sequence Number greater than 1 means that the structure is grouped with one or more other culverts to achieve the 16 square foot opening requirement. Because the data reported to the Small Structure Inventory does not identify the other culverts, this area of the spreadsheet attempts to find culverts within 120 feet, based on reported latitude and longitude, that can be grouped together.

If the Sequence Number is greater than 1, meaning the culvert is grouped with another, but no nearby culvert exits, the message No nearby culvert displays in Column K. This message usually indicates that the Sequence Number was reported incorrectly. Another less likely explanation is that its "partner" culvert was not reported in the inventory.

Columns L – O list:

- the spreadsheet Row Number of the nearest structure northwest of the culvert
- the Small Structure Number of the nearest North & West structure
- the Distance (in feet) from the culvert to the nearest North & West structure
- the spreadsheet Row Number of the nearest North & West structure, if it is within 120 feet of the culvert

Columns P – S likewise list:

- the spreadsheet Row Number of the nearest structure southeast of the culvert
- the Small Structure Number of the nearest South & East structure
- the Distance (in feet) from the culvert to the nearest South & East structure
- the spreadsheet Row Number of the nearest South & East structure, if it is within 120 feet of the culvert

Columns T – X attempt to identify culverts that can be grouped together.

- Columns T V assemble possible groups of nearby culverts.
- Columns W and X list the row number and the Small Structure Number of another structure with **Seq #** equal to 1 that the culvert in this row could be grouped with. In Figure 30, for example, the two culverts in Rows 64 65 can be grouped together to meet the culvert opening requirement.

## Action Required:

• The most common error related to grouping involves misreporting the Sequence Number (*Item 5, Column AM*). If a culvert is not located near any other culverts, a Sequence Number of 1 must be assigned.

#### 6.2.4 Outlet Area

Columns Y –AG estimate the outlet area of the culvert or group of culverts, which affects the culvert's eligibility for RAIF funding.

	Х	Y	Z	AA	AB	AC	AD	AE	AF	AG	AH	AI	AJ
1		Pipes	and Area for I	Row		Pi	pes and A	Area for Gro	up		E	igible Structures:	99
2	Group with Small Structure Number	Number of Barrels (changes in red)	Estimated Culvert Outlet Area ft <sup>2</sup>	Number of Barrels ≥16ft <sup>2</sup>	Number of Barrels	Culvert Group Estimated Outlet Area ft <sup>2</sup>	Number of Barrels <16ft <sup>2</sup>	Small Pipe Estimated Outlet Area ft <sup>2</sup>	# of Other Groups >16ft <sup>2</sup>	Total Possible Small Structures	Eligible Small Structures	ltem 1 County Name	ltem 2 Town or Township Name
22	10-0984-2708	1	20	1	1	20	0	0	0	1	1		West Butte (Unorg.)
23	10-1131-3675	1	30	1	1	30	0	0	0	1	1	BUTTE	West Butte (Unorg.)
24	10-1223-4007	1	13	0	2	26	2	26	1	1	1	BUTTE	West Butte (Unorg.)
25	10-1223-4007	1	13	0								BUTTE	West Butte (Unorg.)
26	10-1223-4064	1	27	1	1	27	0	0	0	1	1	BUTTE	West Butte (Unorg.)

Figure 31: Columns Y – AG Estimate Outlet Area and Indicate RAIF Eligibility

Column Z estimates the outlet area, to the nearest square foot, of the culvert in this row, based upon the culvert's Shape (*Item 23, Column BE*), Span (*Item 24, Column BF*), Rise (*Item 25, Column BG*), and Number of Cells (*Item 20, Column BB*). If the area is less than 16 square feet, the value is highlighted in pink, as shown in Figure 31.

If the culvert is grouped with culverts in other rows, Column AC estimates the total outlet area of the group of culverts. In Figure 31, the culverts in rows 24 and 25 are grouped, as indicated by the same Small Structure Numbers listed in Column X. Each culvert has an opening of 13 square feet (less than the 16 square foot requirement), but together they have a combined opening of 26 square feet, making them eligible for RAIF. If the opening area of the group is less than 16 square feet, the value is highlighted in pink.

#### 6.2.5 RAIF Eligibility

Column AH indicates the number of RAIF-eligible small structures in the culvert group, in consideration of the requirements set in SDCL § 31-41:

- the reported Road System (Item 3, Column AK)
- the reported Road Maintenance Level (Item 12, Column AT)
- the Culvert Group Estimated Outlet Area (Column AC).

The total number of RAIF-eligible culverts, based on data imported from the Small Structure Inventory, is shown in Cell AJ1 (Figure 31).

## Action Required:

- Verify that the Culvert Group Estimated Outlet Area (Column AC) is reasonable. The calculation will be reasonable if the Shape (*Item 23, Column BE*), Span (*Item 24, Column BF*), Rise (*Item 25, Column BG*), and Number of Cells (*Item 20, Column BB*) are reported correctly.
- If the culvert Shape (*Item 23, Column BE*) was reported as "Other" the Outlet Area is estimated as if "Pipe Arch" were reported. If another shape—such as circular, elliptical, or rectangular—is more appropriate, edit the Shape accordingly.
- Verify that the Culvert Group Estimated Outlet Area is correct. A common error is to report culverts
  individually but then list the total number of barrels in the Number of Cells (*Item 20, Column BB*) for
  every culvert. For example, listing two culverts in individual rows and recording the Number of Cells
  as 2 for each row causes the estimate to be twice as large as it should be. <u>This can affect RAIF
  eligibility</u>.

• If the eligibility of the culvert or culvert group is unexpected, check that data for the Road System (*Item 3, Column AK*), Road Maintenance Level (*Item 12, Column AT*), and culvert shape and dimensions are reported correctly. Edit any incorrectly reported entries.

#### 6.2.6 Missing Culvert Inventory Data

Most of Columns AI – CP, which contain the culvert data reported to the Small Structure Inventory, are set to flag missing entries by shading the cells orange as indicated in Row 22 of Figure 31.

Some items, like Small Structure Local Identifier (*Item 4, Column AL*) or Inventoried By (*Item 6, Column AN*) are mainly informational. Although not essential to establish funding eligibility or develop future small structure improvement plans, the information can be useful to local road managers and officials. Reporting the missing information is encouraged when possible.

Other items, especially those relating to culvert location, jurisdiction, type, dimensions, and condition are essential to establishing funding eligibility and developing future structure improvement plans. Failure to accurately report the information will hinder planning and analysis later. Any item that affects the culvert's eligibility for RAIF funding is especially important.

A few counties chose to report <u>all</u> of their culverts in the Small Structure Inventory—including those on the County Primary system—but to skip entering condition information for culverts ineligible for RAIF funding. This is acceptable, but the missing information is unavailable for analysis.

## Action Required:

 Review Columns AI – CP for missing data values. Strive to report all items related to culvert jurisdiction, location, type, dimensions, and condition for all structures potentially eligible for RAIF funding.

## 6.2.7 Skew Angle

A few agencies appear reported Skew Angle (*Item 28, Column BJ*) incorrectly, as shown by shaded values in Figure 33. As shown in Figure 32, Skew Angle is to be measured between the culvert alignment and a line running perpendicular to the direction of the road. The Skew Angle of a culvert lying at right angles to the roadway is 0°. The Skew Angle of the culverts in Figure 32 is approximately 18°. A culvert with a

Figure 32: Culvert Skew Angle Definition

Skew Angle of 89° would run nearly parallel to the roadway—which never happens.

To flag possibly incorrectly reported values, cells in Column BA highlight values greater than 45° yellow and values greater than 60° orange.

BI

BH

BJ

Figure 33: Improperly Reported Skew Angle

## Action Required:

Verify that the values reported for Skew Angle (*Item 28, Column BJ*) are correct. If the Skew Angle was measured incorrectly (between the culvert and the road centerline), as appears to be the case in Figure 33, the correct value can be calculated by subtracting the incorrect value from 90°. The 89° values would change to 1° (or 0°) and the 60° values to 30°.

#### 6.2.8 Load Limits

Columns CI – CL list information regarding Load Posting for the culvert. Two types of errors are highlighted in orange.

- Column CI of Row 4 in Figure 34 indicates the culvert is posted for load, but no weight limits are reported in Columns CJ – CL. If the culvert is posted, a weight limit is needed in at least one of the Columns CJ – CL.
- Column CJ of Row 5 indicates a 2-ton axle weight limit. Although possible, this value is quite unlikely. Any value less than 5 tons in Columns CJ – CL highlights orange.

Discrepancies

A few agencies made a third error, which was to list the spring load restriction in effect on the road instead of the permanent Load Posting for the culvert. Only Load Postings specific to the culvert should be reported.

## Action Required:

- Verify that culverts posted for load restrictions are identified properly.
- Verify that the load restrictions apply to the culvert, not the roadway in general.
- If a culvert is "Posted for load", ensure that proper values are reported for Axle Weight Load Posting (*Item 69, Column CJ*), Load Posting for Single Unit Vehicles (*Item 70, Column CK*), and Load Posting for Combination Vehicles (*Item 71, Column CL*).

## 6.3 Small Bridge Inventory and Data Checks

The import process described in Section 6.1 copies small bridge data from the South Dakota Small Structure Inventory into the **Small\_Bridges** worksheet in order of Small Structure Number. The **Small\_Bridges** worksheet (Figure 35) consists of two distinct regions.

	А	В	с	D	Е	F	G	н	1	J	к	L	М	N	0

## Figure 35: Small\_Bridges Worksheet

The right section of the worksheet, Columns L – AY normally shown in white cells, list the bridge-related items reported in the Small Structure Inventory in order of Small Structure Number. Within this area, missing values are shaded light orange and questionable values are highlighted in other colors. This data may be altered, but <u>changes made in the spreadsheet do not propagate back to the SD Small Structure Inventory</u>. To be permanent, changes must be entered directly into to the SD Small Structure Inventory.

The left section of the worksheet, Columns A – K shown in colored cells, contains formulas that check whether the small bridge locations lie near their reported Road Systems and indicate whether the reported Maintenance Level qualifies the structure for the Rural Access Infrastructure Fund. These formulas must not be changed manually.

#### 6.3.1 Road System

Column A **Reported System** reflects the Road System (*Item 3, Column N*) reported in the Small Structure Inventory (Figure 36).

-	A	В	С	D	E	F	G	Н	1	J	K
1		Str	icture Maps	to GIS Roa	d Syst	ems as of 03/29/2	2024				Elig
2	Reported System	County	Secondary	Township	Other	All Systems	Mapped System (changes in red)	Eligible System	Highway Maintenance Level	NBIS Bridge Length (ft)	Bridge RAIF Eligible
3	Township			Township		Township	Township	Yes	Full	12	Yes
4	County	County				County	County	No	Full	7	No
5	Township			Township		Township	Township	Yes	Full	15	Yes
6	County			Township?		Township	Township	Yes	Full	14	Yes

Columns B – G check the whether the Road System (*Item 3, Column N*) whether

the small bridge maps to a Road System other than reported in the inventory, based on the reported Latitude (*Item 8, Column R*) and Longitude (*Item 9, Column S* and data on record at the South Dakota Department of Transportation when the Excel workbook was published, listed in cells B1 - G1.

The process is similar to that described for culverts in Section 6.2.1. The reported road system is accepted if it matches any of the possible GIS road systems. If no road system is reported, or if the small bridge clearly lies along a road system different from what was reported (Row 6), the GIS system is used instead.

Column H **Eligible System** indicates whether the Road System is eligible for RAIF funding. Township and County Secondary roads are eligible and are listed as Yes. Roads on the County Primary system are not eligible and are listed as No and shaded pink.

## Action Required:

- Verify that Road System is reported for every structure.
- Determine the correct Road System for any structure that maps to a system different from the Reported System.
- If the Road System is incorrectly reported to the Small Structures Inventory, correct the entry.
- If the Road System is correctly reported and SDDOT's local road inventory may be wrong, please contact Greg Pollreisz at 605.773.6645 or greg.pollreisz@state.sd.us to resolve the question.

## 6.3.2 Maintenance Level

Column I **Highway Maintenance Level** reflects the Road Maintenance Level (*Item 12, Column V*) reported in the Small Structure Inventory. Only structures on Full Maintenance and Minimum Maintenance roads, such as that in Rows 4 in Figure 36, are eligible for RAIF funding. Structures on No Maintenance roads, such as in Row 4, are not eligible and are shaded pink.

## Action Required:

• Verify that the reported Highway Maintenance Level is correct. Edit the item in the Small Structure Inventory if necessary.

## 6.3.3 NBIS Bridge Length

Column J **NBIS Bridge Length** reflects the data reported for NBIS Length (*Item 53, Column AC*). Structures with NBIS Length > 20 ft are not eligible for RAIF funding and are shaded pink.

## Action Required:

• Verify that the reported NBIS Length (*Item 53, Column AC*) is correct. Edit the item in the Small Structure Inventory if necessary.

Figure 36: Columns A – K of Small\_Bridges Worksheet

## Column K Bridge RAIF Eligible is Yes if the structure:

- lies on the Township or County Secondary system, and
- lies on a Full Maintenance road, and
- is not more than 20 feet long

The total number of RAIF-eligible small bridges, based on data imported from, based on data currently reported in the Small Structure Inventory, is shown in Cell M1 (Figure 34).

## Action Required:

• Verify that Road System, Highway Maintenance Level, and NBIS Bridge Length are reported correctly Edit entries in the Small Structure Inventory if necessary.

## 6.3.5 Missing Small Bridge Inventory Data

Missing data for small bridges is flagged in the same manner as missing data for culverts (Section 6.2.6).

## Action Required:

 Review Columns L – AY for missing data values. Strive to report all items related to small bridge jurisdiction, location, type, dimensions, and condition for all structures eligible for RAIF funding. Edit entries in the Small Structure Inventory if necessary.

## 6.3.6 Skew Angle

A few agencies reported Skew Angle (*Item 58, Column AH*) incorrectly, as shown by shaded values in Figure 38. As shown in Figure 37, Skew Angle is to be measured between the bridge end and a line running perpendicular to the direction of the road. The Skew Angle of an unskewed bridge is 0°. The Skew Angle of the bridge in Figure 37 is approximately 10°. A bridge with a Skew Angle of 89° never happens.

Angle Definition

Figure 38: Improperly Reported Skew Angle

To flag possibly incorrectly reported values, cells in Column AF highlight values greater than 45° yellow and values greater than 60° orange.

## Action Required:

Verify that the values reported for Skew Angle (*Item 58, Column AH*) are correct. If the Skew Angle is measured incorrectly (between the culvert and the road centerline), as appears to be the case in Figure 38, the correct value can be calculated by subtracting the incorrect value from 90°. The 89° values in Figure 38 would change to 1° (or 0°) and the 60° values to 30°.

## 6.3.7 Load Limits

Columns AR-AU list information regarding Load Posting for the bridge. Two types of errors are highlighted in orange.

 Column AR of Row 3 in Error! Reference source not found. indicates the bridge is posted for load, but no weight limits are reported in Columns AS-AU. If the bridge is posted, a weight limit is needed in at least one of the Columns AQ – AS.

Figure 39: Small Bridge Load Posting Data Discrepancies

• Column AT of Row 4 indicates a 4-ton axle weight limit. Although possible, this value is unlikely. Any value less than 5 tons in Columns AS – AU highlights orange.

A few agencies made a third error, which was to list the spring load restriction in effect on the road instead of the permanent Load Posting for the bridge. Only Load Postings specific to the bridge should be reported.

## Action Required:

- Verify that bridges posted for load restrictions are identified properly.
- Verify that the load restrictions apply to the bridge, not the roadway in general.
- If a bridge is "Posted for load", ensure that proper values are reported for Axle Weight Load Posting (*Item 69, Column AS*), Load Posting for Single Unit Vehicles (*Item 70, Column AT*), and Load Posting for Combination Vehicles (*Item 71, Column AU*).

## 6.4 Individual Structure Detail Reports

After exporting the CSV files for culverts and small bridges from the South Dakota Small Structure Inventory and importing them into the spreadsheet, the user may generate detailed reports for individual small structures by specifying the Small Structure Number of each desired culvert or small bridge. Each report lists complete inventory information for the specified structure. The worksheet may be duplicated if the user wishes create reports for multiple small structures.

Photographs taken during the inventory process can be appended to the detail report to illustrate the condition of the small structure and the drainage area.

As an agency is formulating its 5-Year Improvement Plan, the individual culvert and small bridge detail reports can help road managers:

- asses small structures' condition
- evaluate need for repair, rehabilitation, or replacement
- identify components of the small structure that do or do not need improvement

When an agency applies for funding, individual culvert and small bridge detail reports can be attached to the application to substantiate the level of need and demonstrate the suitability of the recommended work.

## 6.5 Culvert and Bridge Summary Reports

The Excel workbook includes two worksheets—**Culvert Summary** and **Small Bridge Summary**—that list the culverts or small bridges and supply the information required for the list of small structures in the 5-Year Small Structure Improvement Plan. In addition to the location of each small structure, the summary lists its maintenance level, dimensions, overall condition, and load postings if any exist. Structures are listed in order of Small Structure Number.

Based on the small structure's road system, maintenance level, and dimensions, the worksheet indicates whether it is eligible for Rural Access Infrastructure funding. Groups of closely spaced culverts are considered together in evaluation of cross-section area.

The information in each worksheet can be filtered to show only the road system of interest—county, county secondary, other, township, or all. Similarly, information can be filtered to show all small structures or only those lying within a certain township.

Figure 42 shows one page of a **Culvert Summary** worksheet. The **Small Bridge Summary** worksheet of Figure 44 similarly lists small bridges.

## 6.6 5-Year Improvement Plan Project List

The Excel workbook provides one worksheet—**Improvement List Template**—to help prepare the Proposed Project List (Figure 44) required for the 5-Year Small Structure Improvement Plan. The worksheet allows up to ten projects to be listed. If more are needed, a copy of the worksheet can be added to the workbook.

Proposed projects may be either culverts or small bridges. If the **Culverts** button is selected, the project will be configured for culvert information. A single culvert or culvert group can be entered into the Small Structures area of the form. Inventory information is automatically populated for all selected culverts. RAIF eligibility is confirmed against the road system, maintenance level, and combined area of the selected culverts.

If the **Small Bridge** button is selected, the project will be configured for small bridge information. Only a single bridge may be entered into the Small Structures area of the form. Inventory information is automatically populated for the single selected structure. RAIF eligibility is confirmed against the road system, maintenance level, and NBIS length of the small bridge.

For both culverts and small bridges, the worksheet automatically populates summary information related to location, maintenance level, traffic served, dimensions, and overall condition.

Additional information must be entered into the tan worksheet cells for each project. One area identifies the broad work categories that are planned along with total estimated cost. A second area identifies anticipated funding sources and amounts. The third area is for comments that briefly explain the planned work and funding.

## 6.7 Culvert and Bridge Funding Applications

Two worksheets—the **Culvert Application Template** and **Small Bridge Application Template**—provide a convenient Rural Access Infrastructure Fund application form for submission to the county board of commissioners.

The **Culvert Application Template** in Figure 45 shows a hypothetical application for a group of two 60" round galvanized culverts in fair condition. When the Small Structure Numbers of the two culverts are entered in the Small Structure area of the form, the culverts' dimensions, type, outlet area, and overall condition are automatically populated. Information about the culverts' location and use is also populated in the **Highway & Traffic Characteristics** section of the form.

Additional information, consistent with the application evaluation criteria specified in SDCL § 31-34, must be entered manually. This information includes traffic uses, traffic counts (optional), and a description of public safety impact.

The additional information also includes a description of the hydrological impact on stream flow. If the planned work will change the culvert cross-section area or significantly alter channel characteristics, a hydraulic analysis is advisable.

The **Improvement Description** section of the form is used to describe the nature of the planned work. For each element of the culverts, checkboxes indicate whether maintenance and repair, partial replacement, or full replacement is planned. Work category checkboxes are also provided for work relating to channel improvement, roadway restoration, planning and engineering studies, and "other" work. The estimated cost of each type of work must be provided in the rightmost column of the area. The section concludes with a brief explanation of the planned work, the planned work year, and an indication of who will perform the work.

Information about funding sources and amounts must be entered into the **Funding Plan** section of the form, along with a brief explanation of any special funding arrangements.

The final **Application Approval and Submission** section of the form identifies the submitting agency and person, along with the date of the agency resolution approving the application and the date the application is submitted. If the submitting agency is a township, it must certify that it imposes either an annual \$0.50 mil levy or a tax levy opt out for secondary roads.

Figure 46 illustrates a similar application for a small bridge project using the Bridge Application Template.

These worksheets may be duplicated if the user wishes to create applications for multiple small structures.

## APPENDIX A RAIF STATUTE AND LEGISLATION

## SDCL § 31-34 Rural Access Infrastructure<sup>26</sup>

**31-34-1. Definition.** For the purposes of this chapter, the term, small structure, means any small bridge or culvert with an opening of sixteen square feet or more located on a township road or county secondary road, excluding bridges as defined in § 31-14-1.

**31-34-2. Fund distribution by state--Inventory--Grants.** Before August 1, 2021, the Department of Revenue shall distribute the sum of three million dollars on a pro rata basis to each county for the purpose of planning and completing an inventory of small structures as prescribed by the Department of Transportation. Before August 1, 2022, the Department of Revenue shall distribute a portion of the sum of three million dollars to each county based on the allocation calculated in accordance with this section for the purposes described in § 31-34-3. Each county's allocated percentage is calculated by using the total number of small structures on township roads and county secondary roads located in a county divided by the sum of all small structures on township roads and county secondary roads in the state as reported to the Department of Transportation, multiplied by one hundred. Each county that receives moneys from this rural access infrastructure program shall use the moneys in accordance with the provisions of this chapter.

**31-34-3.** Distribution of funds by county--Permissible uses. Each county shall establish a rural access infrastructure fund for the deposit of moneys received pursuant to this chapter. The board of county commissioners may only distribute fund moneys for the following expenses:

- (1) Engineering, hydrological studies, planning, materials, and other costs as necessary to plan for and complete the projects;
- (2) Construction, rehabilitation, or replacement of small structures located in townships complying with the requirements of this chapter;
- (3) Construction, rehabilitation, or replacement of small structures described in a county highway and bridge improvement plan that are located on county secondary highways.

The moneys may not be used on no-maintenance roads roads.

Moneys not obligated or spent from a county's fund may be used for the expenses until reverted pursuant to § 4-8-21. Moneys may only be used for the expenses of those small structures inventoried with the department, as referenced in § 31-34-2, by June first of the preceding fiscal year.

**31-34-4. Application process.** Applications for use of moneys allocated to a fund pursuant to this chapter must be submitted to the board of county commissioners on or before October thirty-first on forms prescribed by the association of county commissioners. The board of county commissioners shall award the moneys no later than the immediately following January fifteenth.

Applications from townships must be accompanied by a resolution approved by the township board of supervisors authorizing the application and any funding commitments made by the township. The township or county share is a minimum of twenty percent of the sum necessary to complete the project.

Applications for county secondary highways must be submitted by the county highway superintendent.

If a county declares a disaster, the deadline by which an application must be submitted is waived, provided that the application meets the other requirements of this section.

<sup>&</sup>lt;sup>26</sup> SDCL 31-34, Rural Access Infrastructure, <u>https://sdlegislature.gov/Statutes/31-34</u>, as of April 1, 2024.

**31-34-5.** Criteria for award. The board of county commissioners shall, at a minimum, consider the following criteria in awarding rural access infrastructure grants:

- (1) Traffic use of the highway;
- (2) Public safety;
- (3) Residential, commercial, recreational, and other uses of the highway;
- (4) Cost of the project;
- (5) Length of detour if the project is not completed;
- (6) Number of residences, farms, and ranches served by the project;
- (7) Contribution from township or others to the project and ability of township to fund the project without utilizing the rural access infrastructure fund;
- (8) Confirmation the project is not located on a no-maintenance or minimum-maintenance road;
- (9) Hydrological impact;
- (10) If the highway does not terminate into a field entrance, driveway, single residence, farm, or ranch;
- (11) The application, or group of applications, that best serves the citizens of this state; and
- (12) Any other matters deemed applicable by the board of county commissioners.

The decisions of the county commissioner shall be final and nonappealable. However, a denied application may be submitted in a subsequent year.

**31-34-6. Township eligibility--Plan and annual report--Tax requirement.** A requesting township shall timely file the township small structure improvement plan pursuant to § 31-34-7 with the county highway superintendent and an annual report pursuant to § 8-10-30 in order to be eligible for the funds. Any township requesting use of rural access infrastructure moneys pursuant to this chapter shall meet at least one of the following requirements:

- (1) Impose an annual property tax levy, pursuant to § 10-12-28.2; or
- (2) Impose a tax levy opt out pursuant to § 10-13-36.

**31-34-7. Township eligibility--Contents of plan--Updates.** To be eligible to receive funding from the rural access infrastructure fund established under this chapter, a township shall, each year by August thirty-first, submit to the county that township is located in, a township small structure improvement plan and any updates shall be made in accordance with this section.

The township small structure improvement plan shall include:

- (1) One or more maps showing the location of all small structures within the township;
- (2) The location, width, and length of each small structure;
- (3) A report on the condition of each small structure;
- (4) Whether the small structure is posted for load capacity, and if so, what the posted limits are;
- (5) A list of all small structure improvement projects proposed to be undertaken by the township over the next five years including the location of the project, type of project, source of funding for the project, estimated cost of the project, and the year the project is proposed to be completed; and
- (6) Such additional items as may be prescribed by the Department of Transportation.

**31-34-8.** County use of funds conditioned. The county commission may use rural access infrastructure funds for the construction, rehabilitation, or replacement of small structures on county secondary highways so long as such projects are considered in a similar manner as the small structures that are located within an organized township.

## An Act to revise the eligibility of roads for the rural access infrastructure fund.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF SOUTH DAKOTA:

**Section 1**. That § 31-34-3 be AMENDED: 31-34-3. Each county shall establish a rural access infrastructure fund for the deposit of moneys received pursuant to this chapter. The board of county commissioners may only distribute fund moneys for the following expenses:

(1) Engineering, hydrological studies, planning, materials, and other costs as necessary to plan for and complete the projects;

(2) Construction, rehabilitation, or replacement of small structures located in townships complying with the requirements of this chapter;

(3) Construction, rehabilitation, or replacement of small structures described in a county highway and bridge improvement plan that are located on county secondary highways.

The moneys may not be used on a no maintenance road.

Moneys not obligated or spent from a county's fund may be used for the expenses until reverted pursuant to § 4-8-21. Moneys may only be used for the expenses of those small structures inventoried with the department, as referenced in § 31-34-2, by June first of the preceding fiscal year.

**Section 2**. That § 31-34-5 be AMENDED: 31-34-5. The board of county commissioners shall, at a minimum, consider the following criteria in awarding rural access infrastructure grants:

(1) Traffic use of the highway;

- (2) Public safety;
- (3) Residential, commercial, recreational, and other uses of the highway;(4) Cost of the project;
- (5) Length of detour if the project is not completed;
- (6) Number of residences, farms, and ranches served by the project;

(7) Contribution from the township or others to the project and the ability of the township to fund the project without utilizing the rural access infrastructure fund;

- (8) Confirmation the project is not located on a no maintenance road;
- (9) Hydrological impact;
- (10) If the highway does not terminate into a field entrance, driveway, single residence, farm, or ranch;
- (11) The application, or group of applications, that best serves the citizens of this state; and
- (12) Any other matters deemed applicable by the board of county commissioners.

The decisions of the county commissioner must be final and nonappealable. However, a denied application may be submitted in a subsequent year.

<sup>&</sup>lt;sup>27</sup> SB124 An Act to revise the eligibility of roads for the rural access infrastructure fund, 2024 South Dakota Legislature, Pierre, SD, .<u>https://mylrc.sdlegislature.gov/api/Documents/267111.pdf</u>.

2024 South Dakota Legislature Senate Bill 188<sup>28</sup>

An Act to modify the time before which rural access infrastructure grant moneys must be expended or obligated.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF SOUTH DAKOTA:

**Section 1. That § 31-34-3 be AMENDED: 31-34-3.** Each county shall establish a rural access infrastructure fund for the deposit of moneys received pursuant to this chapter. The board of county commissioners may only distribute fund moneys for the following expenses:

(1) Engineering, hydrological studies, planning, materials, and other costs as necessary to plan for and complete the projects;

(2) Construction, rehabilitation, or replacement of small structures located in townships complying with the requirements of this chapter;

(3) Construction, rehabilitation, or replacement of small structures described in a county highway and bridge improvement plan that are located on county secondary highways.

The moneys may not be used on no maintenance roads or minimum maintenance roads.

Moneys received under this chapter must be obligated or spent by the county before the end of the 2029 fiscal year. All other unobligated or unspent moneys may be used for expenses until reverted pursuant to § 4-8-21. Moneys may only be used for the expenses of those small structures inventoried with the department, as referenced in § 31-34-2.

<sup>&</sup>lt;sup>28</sup> SB188 An Act to modify the time before which rural access infrastructure grant moneys must be expended or obligated, 2024 South Dakota Legislature, Pierre, SD, <u>https://mylrc.sdlegislature.gov/api/Documents/266092.pdf</u>.

# APPENDIX B GLOSSARY

Term	Meaning
Abutment	A part of the bridge substructure at either end of a bridge that supports the superstructure and
	provides lateral support for the approach roadway embankment
Average Daily Traffic (ADT)	The average bi-directional volume of traffic for the average 24-hour period at a specific location or segment of road
Barrel	The main portion of a culvert, excluding inlet and outlet structures
Bearing	A substructure element supporting the superstructure while permitting limited movement
Box Culvert	A culvert of rectangular cross-section, typically concrete
Bridge	According to SDCL 31-14-1, "a structure, including supports, erected over a depression or an obstruction, as water, highway, or railway, the structure having a length measured along the center of the roadway of more than twenty feet between undercopings of abutments or extreme ends of openings for multiple boxes and pipes where the clear distance between openings is less than half of the smaller contiguous opening"
Channel	The waterway under and near a structure
Cover Height	The depth of embankment over the top of a culvert
Crushing	Load-induced deformation reducing the culvert cross-section area and restricting flow
Culvert	A drainage structure beneath an embankment
Delamination	A mode of failure where a material splits into layers parallel to its surface; in concrete, typically caused by freezing
Embankment	Earth constructed above natural ground to carry a road
Fatigue	The tendency of a component to fail when subjected to repetitive loading
Faulting	Lateral or vertical displacement at joints or cracks
Fender	A structure that protects bridge substructure elements from damage from collisions by floating debris
GPS	Global Positioning System
Infiltration	Migration of soil into a culvert through joints or defects
Joint Separation	Physical displacement between individual sections of culvert
Inlet	A component that collects surface water into a culvert
Inslope	The slope from the edge of the shoulder of the road to toe of the ditch
Leaching	The process of removing substances from a material by passing water through it
Multi-plate	Culvert assembled from curved metal plates to create a large circular or semicircular tube
NBIS	National Bridge Inspection Standards
Outlet	A component that disperses water out of a culvert
Perching	A condition where the culvert inlet or outlet sits above the stream bed
Pier	A substructure unit, located between abutments, that supports spans of a multi-span bridge
Pile or Piling	A foundation shaft driven or cast into underlying rock or soil
Right of Way	The full width of publicly owned land between the property lines on either side of a road
Rise	The maximum inside height of a culvert
Scaling	Gradual disintegration of a concrete surface due to failure of the cement paste exposed to chemicals or freeze-thaw
Scour	Erosion of streambed or bank material due to stream flow, often localized around bridge piers and abutments
SDACO	South Dakota Association of County Officials
SDACC	South Dakota Association of County Commissioners
SDACHS	South Dakota Association of County Highway Superintendents

Term	Meaning
SDATT	South Dakota Association of Towns & Townships
SDCL	South Dakota Codified Law
SDDOT	South Dakota Department of Transportation
SDLTAP	South Dakota Local Transportation Assistance Program
Section Loss	Material loss of a structural element's cross sectional area, often by corrosion or deterioration
Skew Angle	The angle formed by the structure and a line perpendicular to the roadway
Small Bridge	Specific to this Guide, a Small Structure, supported by abutments and possibly piers, that spans a depression or an obstruction and directly bears traffic
Small Structure	According to SDCL § 31-34, "any small bridge or culvert with an opening of sixteen square feet or more located on a township road or county secondary road, excluding bridges as defined in § 31-14-1"
Spalling	Localized material loss in a concrete surface caused by fracture
Span	The maximum inside width of a culvert
Spur Dike	An elongated structure having one end on the bank of a stream and the other end projecting into the stream, used to protect eroding stream banks
Streambed	The bottom of the stream channel
Substructure	Piers, abutments, piles, and footings that support the superstructure and distribute loads into the ground
Superstructure	Girders, beams, braces, and connections that support the deck and connect substructure elements to each other
Undercoping	The front face of a bridge abutment
	(Add other terms as desired)
