

SOUTH DAKOTA

DEPARTMENT OF TRANSPORTATION

2025 Rural Road and City Street Mileage

PREPARED BY:

DIVISION OF PLANNING/ENGINEERING – TRANSPORTATION INVENTORY MANAGEMENT

1-605-773-3278

IN COOPERATION WITH:

United States Department of Transportation

Federal Highway Administration

The South Dakota Department of Transportation gives public notice of its policy to uphold and assure full compliance with the non-discrimination requirements of Title VI of the Civil Rights Act of 1964 and related Nondiscrimination authorities. Title VI and related Nondiscrimination authorities stipulate that no person in the United States of America shall on the grounds of race, color, national origin, religion, sex, age, disability, income level or Limited English Proficiency be excluded from the participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance.

Any person who has questions concerning this policy or wishes to file a discrimination complaint should contact the Department's Civil Rights Office at 1-605-773-3540.

Surface Type

South Dakota utilizes seven distinct surface types for their roads, ranging from basic trails to heavy-duty pavement. A primitive surface is a simple two-track trail usually found along section lines, while an unimproved surface is graded only once or twice a year and lacks a crown or ditch. A graded road has a maintained crown and ditches but no gravel. Brick roads use kiln-fired, vitrified clay. Gravel or crushed-rock roads include a gravel surface along with crown and ditches. Bituminous roads use asphalt made with a petroleum-based bitumen binder, and concrete roads in South Dakota, often called PCC (Portland Cement Concrete), provide a durable surface built to handle heavy traffic.

Rural Road and City Streets

The South Dakota Department of Transportation defines rural roads and city streets based on functional classification and location for federal aid and funding. Local rural roads, often built with a 32-foot minimum width, facilitate agricultural transport, while city streets are categorized by population for municipal funding.
